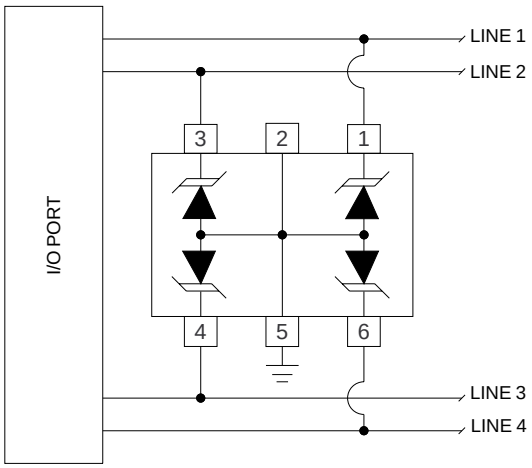
APPLICATION NOTE

The CP Series are TVS arrays designed to protect I/O or data lines from the damaging effects of ESD or EFT. This product series provides both unidirectional and bidirectional protection, with a surge capability of 200 Watts P_{PP} per line for an 8/20µs waveform and ESD protection > 25 kilovolts.

UNIDIRECTIONAL COMMON-MODE CONFIGURATION (Figure 1)

The CP Series provides up to four (4) lines of protection in a common-mode configuration as depicted in Figure 1.

Figure 1 - Unidirectional Configuration
Common-Mode I/O Port Protection



Circuit connectivity is as follows:
- ✔ Line 1 is connected to Pin 1.
- ✔ Line 2 is connected to Pin 3.
- ✔ Line 3 is connected to Pin 4.
- ✔ Line 4 is connected to Pin 6.
- ✔ Pin 5 is connected to ground.
- ✔ Pin 2 is not connected.

BIDIRECTIONAL COMMON-MODE CONFIGURATION (Figure 2)

The CPxxC Series provides up to four (4) lines of protection in a common-mode configuration as depicted in Figure 2.

Circuit connectivity is as follows:
- ✔ Line 1 is connected to Pin 1.
- ✔ Line 2 is connected to Pin 3.
- ✔ Line 3 is connected to Pin 4.
- ✔ Line 4 is connected to Pin 5.
- ✔ Pin 6 is connected to ground.
- ✔ Pin 2 is not connected.

CIRCUIT BOARD LAYOUT RECOMMENDATIONS

Circuit board layout is critical for Electromagnetic Compatibility (EMC) protection. The following guidelines are recommended:

- ✔ The protection device should be placed near the input terminals or connectors, the device will divert the transient current immediately before it can be coupled into the nearby traces.
- ✔ The path length between the TVS device and the protected line should be minimized.
- ✔ All conductive loops including power and ground loops should be minimized.
- ✔ The transient current return path to ground should be kept as short as possible to reduce parasitic inductance.
- ✔ Ground planes should be used whenever possible. For multilayer PCBs, use ground vias.
