

Typical Applications

- CDMA/FM Cellular Systems
- Supports Dual-Mode AMPS/CDMA
- Supports Dual-Mode TACS/CDMA
- Commercial and Consumer Systems
- Battery-Operated Systems

Product Description

The RF2628 is a complete upconverter designed for CDMA/FM cellular applications. The IC contains a double-balanced mixer stage and an output buffer amplifier stage. This device may also be used to directly BPSK modulate a carrier. The mixer is a Gilbert cell with emitter degeneration resistors to provide high IP₃. The output stage is a class-B, push-pull configuration to reduce the overall current and still provide a good 50Ω output match. The unit operates at a supply voltage of 2.7V to 5.0V and does not require any external matching components other than coupling capacitors. This circuit is designed as part of the RFMD CDMA Chip Set, consisting of a Transmit IF AGC Amp, this Transmit Upconverter, a Receive LNA/Mixer, and a Receive IF AGC Amp.

Optimum Technology Matching® Applied

- Si BJT GaAs HBT GaAs MESFET
 Si Bi-CMOS SiGe HBT Si CMOS

Package Style: MSOP-8

Features

- Supports Dual Mode Operation
- +9dBm Output Intercept Point
- Single 2.7V to 5.0V Power Supply
- Internally Matched Inputs and Outputs
- Buffered Output
- Double-Balanced Mixer

Pin	Function	Description	Interface Schematic
1	IF+	Balanced IF input pin. This pin is internally DC-biased and should be DC blocked if connected to a device with a DC level present. For single-ended input operation, one pin is used as an input and the other IF input is AC coupled to ground. The balanced, as well as single-ended, input impedance is 265Ω. The IF input should be used differentially when the part is used as a BPSK modulator.	
2	IF-	Same as pin 1, except complementary input.	See pin 1.
3	GND	Ground connection. For best performance, keep traces physically short and connect immediately to ground plane.	
4	LO BYPASS	Bypass connection for the LO. A capacitor of 100pF to ground should be connected to this pin	
5	LO	Balanced LO input pin. This pin is internally DC-biased and should be DC-blocked if connected to a device with a DC level present. For single-ended input operation, one pin is used as an input and the other LO input is AC-coupled to ground. The balanced, as well single-ended, input impedance is 50Ω.	See pin 4.
6	GND	Same as pin 3.	
7	VCC	Supply voltage pin. External bypassing is required. External RF, LO, and IF bypassing is required. The trace length between the pin and the bypass capacitors should be minimized. The ground side of the bypass capacitors should connect immediately to ground plane.	
8	RF OUT	RF output pin. This pin is internally DC-blocked. The output impedance is 50Ω.
