L5431**High-Precision Variable Shunt
Voltage Regulator**

The L5431 is a high-precision variable shunt voltage regulator IC whose output voltage can be set to a value from approximately 2.5V to 36V by using external resistors. Because of low output resistance and fast pulse response, the L5431 can be most suitably used as high-precision voltage reference, high-speed comparator, or zener diode.

Features

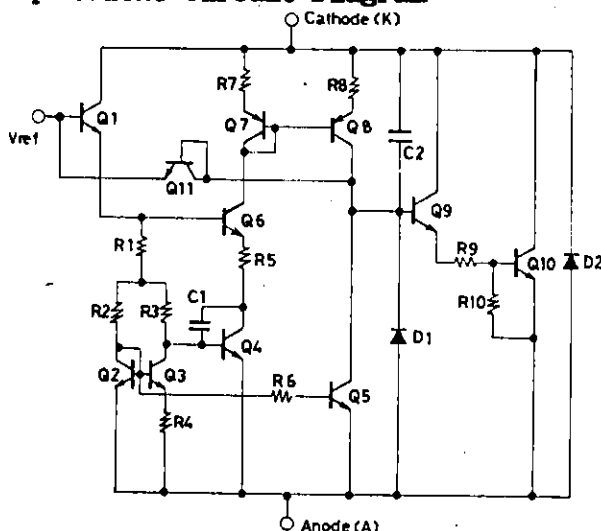

- (1) Excellent temperature characteristic of V_{ref} : 50ppm/ $^{\circ}C$ (typ)
- (2) Output voltage settable: Approximately 2.5V to 36V
- (3) Output flow-in current range: 1mA to 100mA
- (4) Low dynamic resistance: 0.15ohm(typ)
- (5) Fast response
- (6) Low output noise voltage
- (7) Small-sized TO-92

Maximum Ratings at $T_a=25^{\circ}C$

			unit
Maximum Voltage Applied across Cathode and Anode	V_{KA} max	Referenced to anode	37 V
Cathode Current	I_K max		-100 to +150 mA
Reference Voltage Pin Input Current	I_{ref}		-0.05 to +10 mA
Allowable Power Dissipation	P_d max	$T_a \leq 25^{\circ}C$	750 mW
Operating Temperature	T_{opr}		-20 to +85 $^{\circ}C$
Storage Temperature	T_{stg}		-65 to +150 $^{\circ}C$

Recommended Operating Conditions at $T_a=25^{\circ}C$

			unit
Voltage Applied across Cathode and Anode	V_{KA}		V_{ref} to 36 V
Cathode Current	I_K	Stabilized state	1 to 100 mA

Note1: ΔVref(Ta) is defined by using Vref max and Vref min as follows:

$$\Delta V_{ref}(T_a) = V_{ref \max} - V_{ref \min}$$

Note2: The dynamic resistance is defined as follows:

$$|Z_{KA}| = \frac{\Delta V_{KA}}{\Delta I_K}$$
