Pin Assignment

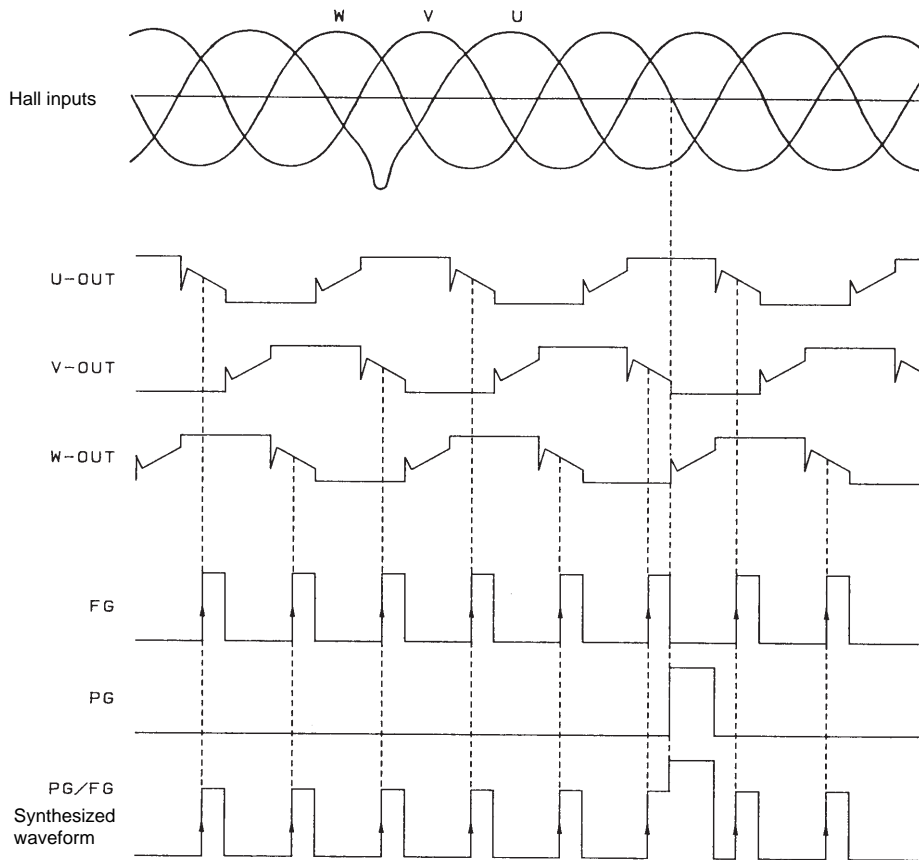

Truth table

	Source → sink	Hall input logic		
		U	V	W
1	W phase → V phase	H	H	L
2	W phase → U phase	H	L	L
3	V phase → U phase	H	L	H
4	V phase → W phase	L	L	H
5	U phase → W phase	L	H	H
6	U phase → V phase	L	H	L

Note: The Hall input "H" and "L" values are defined as follows: "H" means that for that phase the (+) input is higher than the (-) input, and "L" means that for that phase the (+) input is lower than the (-) input. However, note that an input potential difference corresponding to the Hall to output gain is required.

Timing Charts

A05607

Note: The Hall inputs are defined as follows: $U = U_{IN1} - U_{IN2}$, $V = V_{IN1} - V_{IN2}$, and $W = W_{IN1} - W_{IN2}$. Inputs to the Hall input pins must be applied in the phase order shown in the timing chart.

Recommended Special Magnetization Waveforms

A05608

Note: Note that the intersections between the special magnetization and general waveforms and the intersections between pairs of general waveforms must be set up to be 30° apart.

Hall Input Order

A05609

Note: The Hall input order must be set up to be W → V → U.

VG and LIM Pin Usage

- LIM pin: Open
 VG – Rf: Shorted
 $G_m = 0.423/R_f$ (A/V)
 (Closed loop control gain)
 $I_{lim} = (V_{REF} \times 27/200 - 0.2) \times 4.23/3/R_f$
 (Current limit)
- VG pin: Open
 $G_m = 1/R_f$ (A/V)
 (Closed loop control gain)
 $I_{lim} = (V_{REF} \times 27/200 - 0.2) \times 10/3/R_f$
 (Current limit)
- LIM – VREF: Shorted
 No current limit.

A05610

Note: This current limiting function is for protection against unusual and abnormal currents. If a current limit level below the rated current is set, this will, inversely, result in heat generation within the IC.
 When the LIM pin is open, VG is shorted to Rf, and $R_f = 0.47 \Omega$, this will result in a current limit level of about 1.3 to 1.4 A. If this limit falls under the rated value due to mode changes or changes in the value of the Rf resistor, set the current limit to an appropriate value by applying to the LIM pin a voltage that is divided from the VREF to ground potential by resistors of a few kΩ. Alternatively, short the LIM pin to VREF to defeat the current limit function.
