

LB1740

8-Channel, Current-Source Output, Darlington Transistor Array

Overview

The LB1740 is an 8-channel current source output Darlington transistor array made up of PNP transistors and NPN transistors. High output drive capability for very low input current is achieved.

Features

- Eight independent Darlington driver circuits.
- High breakdown voltage (50V), high current source output (500mA).
- With output clamp diodes.
