

LC75396NE

Single-Chip Electronic Volume Control System

Overview

The LC75396NE is an electronic volume control system providing control over volume, balance, 5-band equalizer, and input switching based on serial inputs.

Functions

- Volume control:
The chip provides 81 levels of volume attenuation: in 1-dB step between 0 dB and -79 dB and $-\infty$.
Independent control over left front/rear and right front/rear channels provides balance control.
- Equalizer:
The chip provides control in 2-dB steps over the range between +10 dB and -10 dB. Four of the five bands have peaking equalization; the remaining one, shelving equalization.
- Selector:
The left and right channels each offer a choice of five inputs. The L5 and R5 inputs can be turned on and off independently. An external constant determines the amplification for the input signal.
- Serial data input
— Supports CCB* format communication with the system controller.

Features

- Built-in buffer amplifiers reduce the number of external parts required.
- Silicon gate CMOS process reduces the noise of built-in switch.
- $V_{DD}/2$ reference voltage generation circuit built in.

Package Dimensions

unit: mm

3159-QFP64E

- CCB is a trademark of SANYO ELECTRIC CO., LTD.
- CCB is SANYO's original bus format and all the bus addresses are controlled by SANYO.

Specifications

Absolute Maximum Ratings at $T_a = 25^\circ\text{C}$, $V_{SS} = 0\text{ V}$

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	$V_{DD\text{ max}}$	V_{DD}	11	V
Maximum input voltage	$V_{IN\text{ max}}$	CL, DI, CE, L1 to L5, R1 to R5, LTIN, RTIN, LFIN, RFIN, LRIN, RRIN	$V_{SS} - 0.3$ to $V_{DD} + 0.3$	V
Allowable power dissipation	$Pd\text{ max}$	$T_a \leq 75^\circ\text{C}$, with PC board	550	mW
Operating temperature	T_{opr}		-30 to +75	$^\circ\text{C}$
Storage temperature	T_{stg}		-40 to +125	$^\circ\text{C}$

Calculating the Size of External Capacitors

The LC75396NE supports four bands with peaking characteristics and one band with shelving characteristics

1. Peaking Characteristics (bands F1 to F4)

The external capacitor functions as the structural element of a simulated inductor. The equivalent circuit and the calculations required to achieve the desired center frequency are shown below.

- Equivalent circuit for the simulated inductor

A08855

• Calculation example

Specifications: Central frequency, $F_O = 107 \text{ Hz}$

Q factor at maximum boost, $Q_{+10 \text{ dB}} = 0.8$

— Calculate Q_O , the sharpness of the simulated inductance itself.

$$Q_O = (R1 + R4)/R1 \times Q_{+10 \text{ dB}} \neq 4.270$$

Note: R4 is from the separately issued internal block diagram.

— Calculate C1

$$C1 = 1/2\pi F_O R1 Q_O \neq 0.536 \text{ } (\mu\text{F})$$

— Calculate C2

$$C2 = Q_O/2\pi F_O R2 \neq 0.021 \text{ } (\mu\text{F})$$

• Sample results

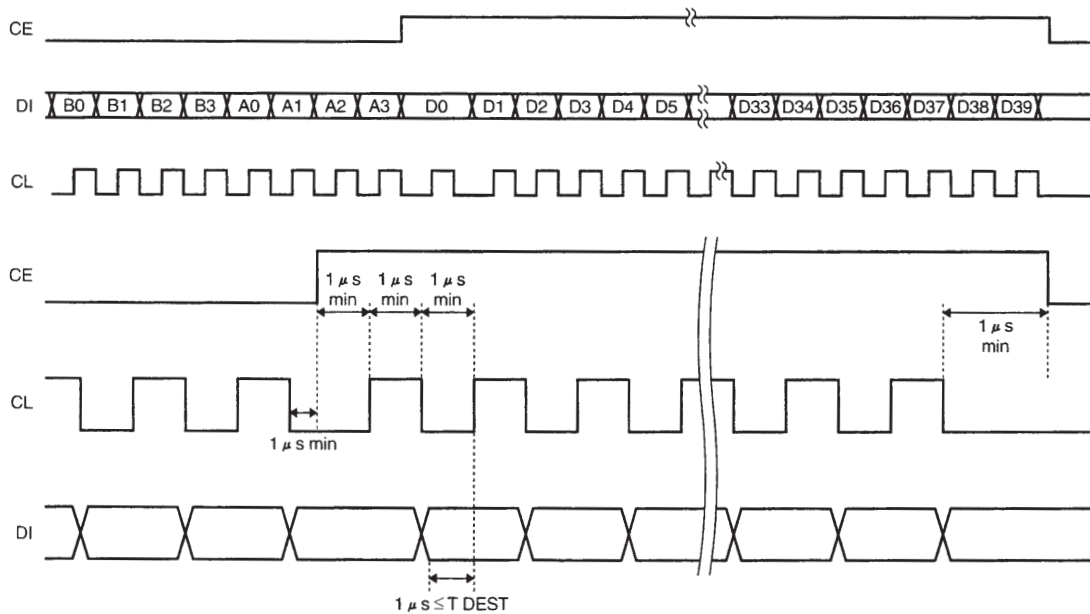

Central frequency F_O (Hz)	C1 (F)	C2 (F)
107	0.536 μ	0.021 μ
340	0.169 μ	6663 p
1070	0.054 μ	2117 p
3400	0.017 μ	666 p

2. Shelving characteristics (Band F5)

Achieving the desired control of 2-dB steps over the range between +10 dB to -10 dB requires choosing a capacitor, C3, with an impedance of 650 Ω .

Control System Timing and Data Formats

To control the LC75396NE, specified sequences are required to be input through the pins CE, CL, and DI. Each sequence consists of 48 bits: an 8-bit address followed by 40 bits of data.

Control is enabled when D32 = 1

Test mode control

D36	D37	D38	D39	Operation
0	0	0	0	These bits are for chip testing and must all be set to 0 in application systems.

Notes: After power is first applied, applications must initialize this chip by sending the initial data (1) and (2) described below.

Initial data ... (1) Address 01000001

Data: (Set the volume to -∞ set both D34 and D35 to 1, and set all other data to 0)

(2) Address 01000001

Data: (Set the volume to -∞, set both D34 and D35 to 0, and set all other data to 0)

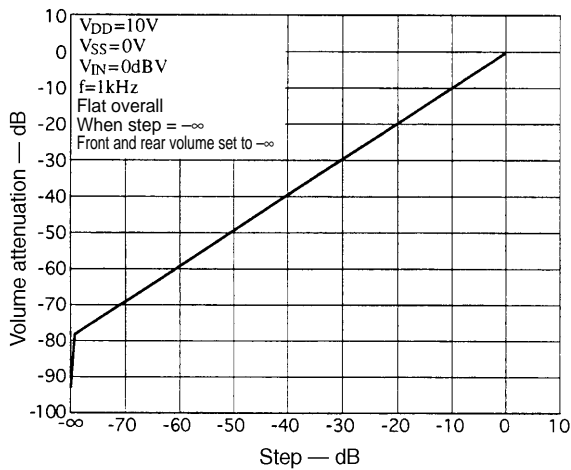

After transferring that data, set the left and right channel initial settings before turning off the mute function.

Usage Notes

- When the power is first applied, the internal analog switches are in indeterminate states. The chip therefore requires muting or other external measures until it has received the proper data.
- After power is first applied, applications must initialize this chip by sending the initial data (1) and (2) described below.
 - Initial data ... (1) Address 01000001
Data: (Set the volume to $-\infty$, set both D34 and D35 to 0, and set all other data to 0)
 - (2) Address 01000001
Data: (Set the volume to $-\infty$, set both D34 and D35 to 1, and set all other data to 0)
 After transferring that data, set the left and right channel initial settings before turning off the mute function.
- Provide grounding patterns or shielding for the lines to the CL, DI, and CE pins so as to prevent their high-frequency digital signals from interfering with the operation of nearby analog circuits.

- No products described or contained herein are intended for use in surgical implants, life-support systems, aerospace equipment, nuclear power control systems, vehicles, disaster/crime-prevention equipment and the like, the failure of which may directly or indirectly cause injury, death or property loss.
- Anyone purchasing any products described or contained herein for an above-mentioned use shall:
 - ① Accept full responsibility and indemnify and defend SANYO ELECTRIC CO., LTD., its affiliates, subsidiaries and distributors and all their officers and employees, jointly and severally, against any and all claims and litigation and all damages, cost and expenses associated with such use:
 - ② Not impose any responsibility for any fault or negligence which may be cited in any such claim or litigation on SANYO ELECTRIC CO., LTD., its affiliates, subsidiaries and distributors or any of their officers and employees jointly or severally.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.
