## On-Screen Video Display Controllers for VCRs

### Overview

The LC74780 and LC74780M are CMOS, video display controllers for superimposing text and low-level graphics onto an NTSC, PAL or PAL-M compatible television receiver. Up to 288, 12 × 18-pixel characters can be displayed under microprocessor control on a 24-character by 12-line display.

The LC74780 and LC74780M feature selectable pixel width and height, and 64 vertical and 64 horizontal display start positions. It also features a flashing enable bit for each character position.

The LC74780 and LC74780M operate from a 5V supply. The LC74780 is available in 24-pin DIPs, and the LC74780M, in 24-pin MFPs.

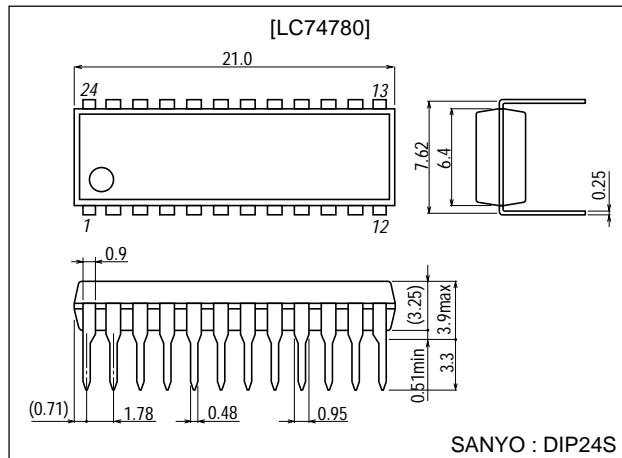

### Features

- Complete text and graphics video overlay circuitry.
- 128-character internal character generator ROM.
- 12 × 18-pixel characters.
- Three pixel widths and three pixel heights.
- Selectable background color.
  - 8 colors at  $4f_{SC}$  (NTSC/PAL/PAL-M)
  - 4 colors at  $2f_{SC}$  (NTSC)
- Built-in synchronization check and separation circuitry.
- Approximately 0.5 or 1 s period character flashing option.
- Screen blanking.
- NTSC, PAL and PAL-M format compatibility.
- 8-bit serial input format.
- 5V supply.
- 24-pin plastic DIP and 24-pin plastic MFP.

## Pin Functions

Number	Name	Description
1	V <sub>SS1</sub>	Ground
2	XIN	Internal sync signal crystal oscillator capacitor connections or external clock input ( $2f_{SC}$ or $4f_{SC}$ ).
3	XOUT	
4	CTRL1	Clock input mode select. HIGH for external clock input mode, and LOW for crystal oscillator mode.
5	CSYNOUT	Composite synchronization signal output. During reset (RST LOW), crystal oscillator clock is output. No output for internal reset command.
6	OSCIN	LC oscillator input. LC circuit for pixel clock generation character output.
7	OSCOUT	LC oscillator output. LC circuit for pixel clock generation character output.
8	SYNC	External synchronization signal check output. HIGH when sync is detected. During reset (RST LOW), pixel clock is output. No output for internal reset command.
9	CS	Serial data input enable when LOW, with pull-up resistance (hysteresis input).
10	SCLK	Clock input for serial data input, with pull-up resistance (hysteresis input).
11	SIN	Serial data input, with pull-up resistance (hysteresis input).
12	V <sub>DD2</sub>	Power supply for composite video image signal level modulation (for analog system).
13	CVOUT	Composite video image signal output.
14	NC	No connection.
15	CVIN	Composite video image signal input.
16	V <sub>DD1</sub>	5V power supply for digital system.
17	SYNCIN	Synchronization separation circuit input. If internal sync separation circuit is not used, use SYNCIN to input an external horizontal or composite synchronization signal.
18	SEPC	Synchronization separation circuit modulator capacitor connection. Leave open if not used.
19	SEPOUT	Composite synchronization separation circuit output. Outputs SYNCIN signal if internal sync separation is not used.
20	SEPIN	Vertical synchronization signal input. Tie to V <sub>DD1</sub> if not used.
21	CTRL2	NTSC/PAL/PAL-M sync signal generation method select input. PAL-M when HIGH. NTSC/PAL/PAL-M selected by command when LOW.
22	CTRL3	SEPIN input control. VSYNC input signal when LOW, and not input when HIGH.
23	RST	System reset input, with pull-up resistance (hysteresis input).
24	V <sub>DD1</sub>	5V power supply for digital system.

## Display Control Features and Characteristics

### Display Control Command Structure

The display control commands, COMMAND0 to COMMAND7, are shifted in 8-bit serial units. The first byte of a command consists of an identification code and data. The second byte consists of data only. Once the command identification code in byte 1 has been written, it is saved until

the next time the first byte is written. If COMMAND1 is written, the display character write mode begins and the first byte does not change. When  $\overline{CS}$  is HIGH, COMMAND0 is set.

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products(including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
