Description

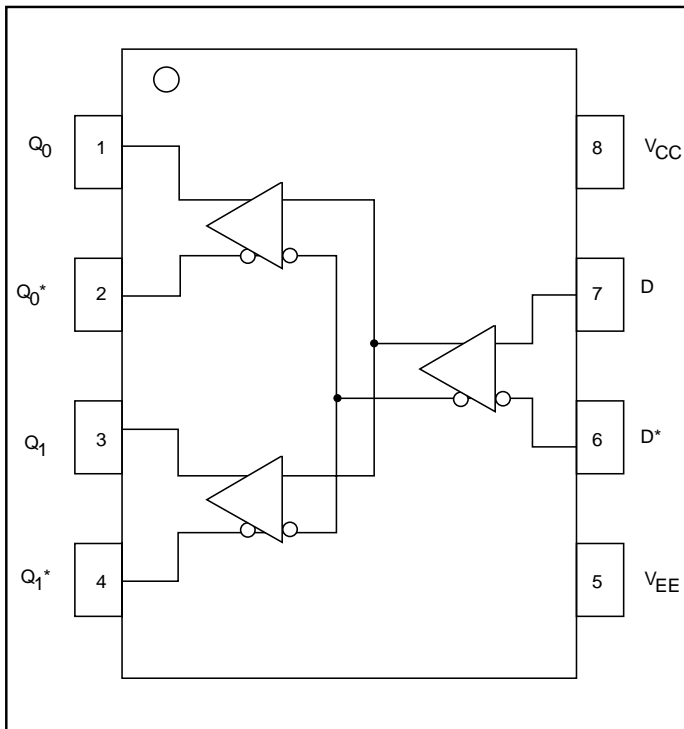

The SK10/100EL11W is a differential 1:2 fanout buffer. This device is fully compatible with MC10/100EL11 and MC100LVEL11. With output transition time much faster than the E111, the EL11W is ideally suited for those applications which require ultimate AC performance.

Under open input conditions, the pulldown resistors will force the Q_0 and Q_1 outputs low and Q_0^* and Q_1^* high.

Features

- Extended Supply Voltage Range: ($V_{EE} = -5.5V$ to $-3.0V$, $V_{CC} = 0V$) or ($V_{CC} = +3.0V$ to $+5.5V$, $V_{EE}=0V$)
- High Bandwidth Output Transition
- 330 ps Propagation Delay
- 5 ps Skew Between Outputs
- Internal Input Pulldown Resistors
- Q Output will Default Low with Inputs Open or at V_{EE}
- New Differential Input Common Mode Range
- Fully compatible with MC10/100EL11 and MC10/100LVEL11
- ESD Protection of $>4000V$
- Industrial Temperature Range: $-40^{\circ}C$ to $+85^{\circ}C$
- Available in both 8 Pin SOIC (150 mils) and MSOP (3mm x 3mm) Packages

Notes:

1. 10EL circuits are designed to meet the DC specifications shown in the table after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse airflow greater than 500 lfpm is maintained. Outputs are terminated through a 50Ω resistor to VCC -2.0V except where otherwise specified on the individual data sheets.
2. 100K circuits are designed to meet the DC specifications shown in the table where transverse airflow greater than 500 lfpm is maintained.
3. Within-device skew defined as identical transitions on similar paths through a device.
4. Duty cycle skew is the difference between a T_{PLH} and T_{PHL} propagation delay through a device.
5. Minimum input swing for which AC parameters guaranteed.
6. CMR range is referenced to the most positive side of the differential input signal. Normal operation is obtained if the high level falls within the specified range and the peak-to-peak voltage lies between $V_{PP(min)}$ and 1V. The lower end of the CMR range varies 1:1 with VEE and is equal to VEE + 1.6V.
7. For standard ECL DC specifications, refer to the ECL Logic Family Standard DC Specifications Data Sheet.
