DESCRIPTION

The SC431 is a three terminal adjustable shunt regulator with thermal stability guaranteed over temperature. The output voltage can be adjusted to any value from 2.5V (V_{REF}) to 36V with two external resistors. The SC431 has a typical dynamic output impedance of 0.25Ω . Active output circuitry provides a very sharp turn on characteristic, making the SC431 an excellent replacement for zener diodes.

The SC431 shunt regulator is available in three voltage tolerances (0.5%, 1.0% and 2.0%) and three package options (SOT-23-3, SO-8 and TO-92). The three voltage tolerances allow the designer the opportunity to select the proper cost/tolerance for their application.

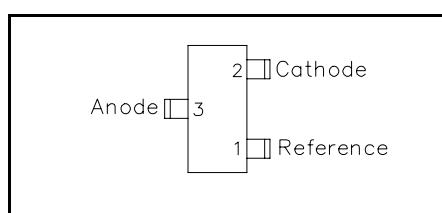

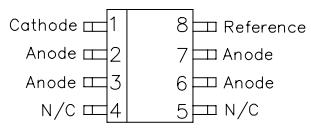

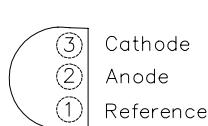

FEATURES

- Wide operating current range $100\mu A$ to $150mA$
- Low dynamic output impedance 0.25Ω typ.
- Trimmed bandgap design $\pm 0.5\%$
- Alternate for TL431, LM431 & AS431

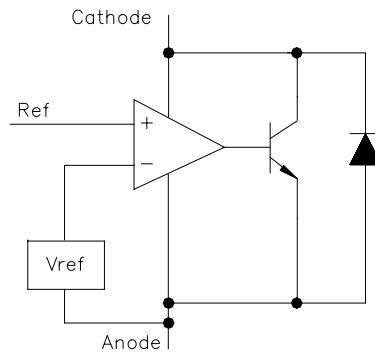

APPLICATIONS

- Linear Regulators
- Adjustable Supplies
- Switching Power Supplies
- Battery Operated Computers
- Instrumentation
- Computer Disk Drives

APPLICATION CIRCUIT

**Test Circuit For Small-Signal
Gain and Phase Shift**

Notes for Application Circuit:

 1) Set V_{OUT} according to the following equation:

$$V_{OUT} = V_{REF} \left(1 + \frac{R_1}{R_2} \right) + I_{REF} R_1$$

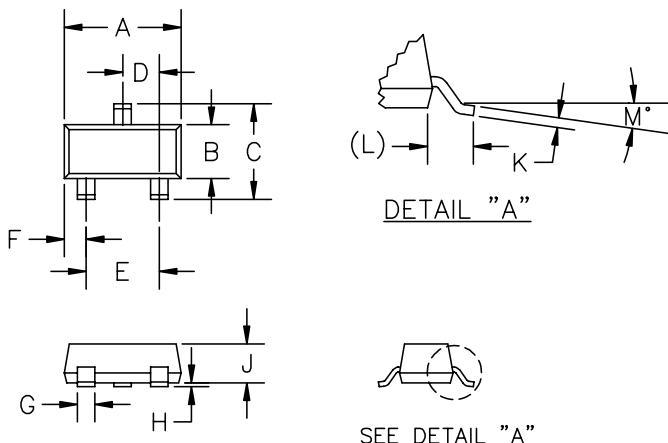

2) Choose the value for R as follows:

- The maximum limit for R should be such that the cathode current, I_Z , is greater than the minimum operating current ($100\mu A$) at $V_{IN(min)}$.
- The minimum limit for R should be such that I_Z does not exceed $150mA$ under all load conditions, and the instantaneous turn-on value for I_Z does not exceed $200mA$. Both of the following conditions must be met:

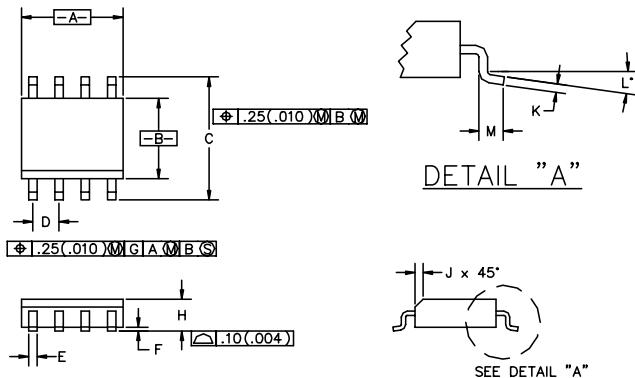

$$R_{min} \geq \frac{V_{IN(max)}}{200 mA} \quad (\text{to limit instantaneous turn-on } I_Z)$$

$$R_{min} \geq \frac{V_{IN(max)} - V_{OUT}}{I_{OUT(min)} + 150 mA} \quad (\text{to limit } I_Z \text{ under normal operating conditions})$$
