NOTES:

- In order to initialize the circuit, \overline{CE}_1 , \overline{CE}_2 and $\overline{OE}/\overline{RFSH}$ should be kept in V_{IH} for 100 μs after power-up and followed by at least 8 dummy cycles.
- AC characteristics are measured at $t_T = 5$ ns.
- AC characteristics are measured at the following condition (see figure at right).
- Address is latched at the negative edge of \overline{CE}_1 or \overline{CE}_2 .
- Measured with a load equivalent to 2TTL + 100 pF.
- Data is latched at the positive edge of R/W or at the positive edge of \overline{CE}_1 or \overline{CE}_2 .
