The S-806 Series is a non-adjusting voltage detector made using a CMOS process. The voltage detectors are composed of a high-precision and low power consumption standard voltage source, a comparator, a hysteresis circuit, and an output driver. The detection voltage is fixed internally, and the output form is Nch open-drain. This series has various product line up.

■ Features

- Low current consumption 10.0 μ A typ. ($V_{DD} = 6.0$ V)
- High-stable standard voltage source built-in 0.8 V typ.
- Good hysteresis characteristics 208 mV typ. (S-806D)
- Good temperature characteristic of detection voltage ± 0.52 mV/ $^{\circ}$ C typ. (S-806D)
- TO-92 plastic packages

■ Applications

- Since there are projection and resin burr on roots of lead terminals formed at Tiebar-cut in TO-92 products, do not solder on them.
