

SP488A and SP489A

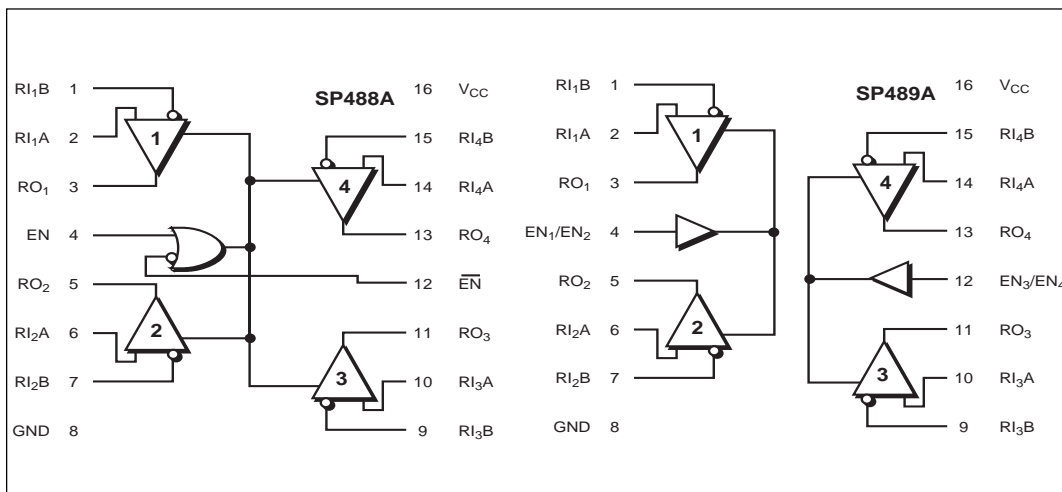

High Speed Quad RS-485/RS-422 Line Receivers

- High Speed Versions of Sipex's SP488 & SP489
- 30Mbps Transmission Rates
- Quad Differential Line Receivers
- RS-485 or RS-422 Applications
- Tri-state Output Control
- 30ns Typical Receiver Propagation Delays
- -7V to +12V Common Mode Input Range
- 1mA Supply Current
- Single +5V Supply Operation
- Pin Compatible with SN75173, SN75175, LTC488 and LTC489

DESCRIPTION...

The **SP488A** and **SP489A** are high speed quad differential line receivers capable of meeting the RS-485 and RS-422 protocols while running at five times the normal transmission rates. The **SP488A** and **SP489A** are enhanced versions of Sipex's SP488 and SP489 quad RS-485/RS-422 line receivers. The **SP488A** features a common receiver enable control; the **SP489A** provides independent receiver enable controls for each pair of receivers. Both feature tri-state outputs and wide common-mode input range. The receivers have a fail-safe feature which forces a logic "1" output when receiver inputs are left floating. Both are available in 16-pin plastic DIP and SOIC packages.

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

V _{CC}	+7V
Input Voltages	
Logic	-0.5V to (V _{CC} +0.5V)
Receiver	±14V
Receiver Output Voltage	-0.5V to (V _{CC} +0.5V)

Small Outline	375mW
(derate 7mW/°C above +70°C)	
Lead Temperature (soldering, 10 sec)	300°C

CAUTION:
ESD (ElectroStatic Discharge) sensitive device. Permanent damage may occur on unconnected devices subject to high energy electrostatic fields. Unused devices must be stored in conductive foam or shunts. Personnel should be properly grounded prior to handling this device. The protective foam should be discharged to the destination socket before devices are removed.

FEATURES...

The **SP488A** and **SP489A** are low-power quad differential line receivers meeting RS-485 and RS-422 serial protocol. The **SP488A** and **SP489A** feature Sipex's BiCMOS process allowing low power operational characteristics of CMOS technology while meeting all of the demands of the RS-485 and RS-422 serial protocols over 10Mbps under load in harsh environments. In fact, the **SP488A** and **SP489A** can transmit signals up to 30Mbps.

The RS-485 standard is ideal for multi-drop applications and for long-distance communication. RS-485 allows up to 32 drivers and 32 receivers to be connected to a data bus, making it an ideal choice for multi-drop applications. Since the cabling can be as long as 4,000 feet, RS-485 transceivers are equipped with a wide (-7V to +12V) common mode range to accommodate ground potential differences. Because RS-485 is a differential interface, data is virtually immune to noise in the transmission line.

DIFFERENTIAL A – B	ENABLES	OUTPUT
	EN ₁ /EN ₂ or EN ₃ /EN ₄	RO
$V_{ID} \geq 0.2V$	H	H
$-0.2V < V_{ID} < +0.2V$	H	X
$V_{ID} \leq 0.2V$	H	L
X	L	Hi-Z

Table 2. SP489A Truth Table

Normally an RS-485 driver will produce no less than 1.5V before cable attenuation. After cable loss, the signal may degrade and have an amplitude of less than 1.0V. The receiver input sensitivity of the **SP488A** and **SP489A** allows the devices to receive signals as low as 200mV.

The **SP488A** features active high and active low common receiver enable controls; the **SP489A** provides independent, active high receiver enable controls for each pair of receivers. Both feature tri-state outputs and a -7V to +12V common-mode input range permitting a ±7V ground difference between devices on the communications bus. The **SP488A/489A** are equipped with a fail-safe feature which forces a logic high at the receiver output when the input is left floating. Both are available in 16-pin plastic DIP and SOIC packages.
