

# Hex Buffer/Converter

## High-Voltage Silicon-Gate CMOS

The SL4049B is inverting hex buffers and feature logic-level conversion using only one supply (voltage  $V_{CC}$ ). The input-signal high level ( $V_{IH}$ ) can exceed the  $V_{CC}$  supply voltage when these devices are used for logic-level conversions. These devices are intended for use as CMOS to DTL/TTL converters.

- Operating Voltage Range: 3.0 to 18 V
- Maximum input current of 1  $\mu$ A at 18 V over full package-temperature range; 100 nA at 18 V and 25°C
- Noise margin (over full package temperature range):  
 0.5 V min @ 5.0 V supply  
 1.0 V min @ 10.0 V supply  
 1.0 V min @ 15.0 V supply
- High-to-low level conversion

SOIC Package: - 7 mW/°C from 65° to 125°C

\*\* The IW4049UB has high-to-low level voltage conversion capability but not low-to-high level; therefore it is recommended that  $V_{IN} \geq V_{CC}$

## RECOMMENDED OPERATING CONDITIONS

\*\* The SL4049B has high-to-low level voltage conversion capability but not low-to-high level; therefore it is recommended that  $V_{IN} \geq V_{CC}$

This device contains protection circuitry to guard against damage due to high static voltages or electric fields. However, precautions must be taken to avoid applications of any voltage higher than maximum rated voltages to this high-impedance circuit. For proper operation, V<sub>IN</sub> and V<sub>OUT</sub> should be constrained to the range  $GND \leq (V_{IN} \text{ or } V_{OUT}) \leq V_{CC}$ .

Unused inputs must always be tied to an appropriate logic voltage level (e.g., either GND or V<sub>CC</sub>). Unused outputs must be left open.
