

GENERAL DESCRIPTION

The S1A0067X01 is a two channel power amplifier with 4.6W typical output on 12.0V Vcc.

It's typical output is 4.6W on VCC = 12.0V. There is no needs of a bootstrap-capacitor due to the use of V-PNP for a power transitory.

So, it is an advantage for making a whole system. It has an additional stand-by function, the pop noise on switc hing it's mute function is much reduced.

The S1A0067X01 has the built-in thermal protection function with hysterisys in order to protect a blocking oscillation in a short period due to a repeated protection switching on over-heating of IC.

The S1A0067X01 has a built-in output-vcc or output-gnd short protection function.

FEATURES

- Two channel 4.6W power Amp (Vcc = 12.0V)
- High power with non bootstrap capacitor
- Mute function
- Stand-by function: 100uA
- Very low pop noise, when mute on/off
- Wide operation voltage: 6.0V – 18.0V
- Include thermal protection with hysteresis
- Output-Vcc, output-GND short protection

PIN DESCRIPTION

Terminal		Type	Description
Name	No.		
Vcc	3, 12	Vcc, PVCC	Power supply
GND	9	GND	Ground
INPUT 1,2	6, 7	INPUT	Input
NF 1,2	5, 8	NF	Pin for negative feedback capacitor
OUTPUT 1, 2	2, 10	OUTPUT	Output
RR	4	RR	Pin for ripple rejection
STAND-BY	11	ST	Pin for stand-by mode
MUTE	1	MT	Pin for mute function control
