

**I-V Photo IC for MiniDisc**

**Description**

The CXA1915AN is a photo IC developed as a photo detector for the optical pickup of MiniDisc. The photodiode for RF signal detection has a built-in I-V amplifier and features low output impedance for stable output.

- Focus servo: astigmatic method
- Tracking servo: three-spot method
- Magneto optical signal (RF signal) detection: Wollaston prism method

**Features**

- I-V amplifier (current-voltage conversion circuit)
- Ultra-compact transparent molded package (SSOP)

**Applications**

Optical pickup for MiniDisc

**Structure**

Bipolar silicon monolithic IC

**Absolute Maximum Ratings (Ta=25°C)**

- Supply voltage           VCC           6           V
  - Operating temperature   Topr       -20 to 90   °C
  - Storage temperature     Tstg      -40 to 90   °C
  - Allowable power dissipation
- |    |     |    |
|----|-----|----|
| Pd | 150 | mW |
|----|-----|----|

**Recommended Operating Conditions**

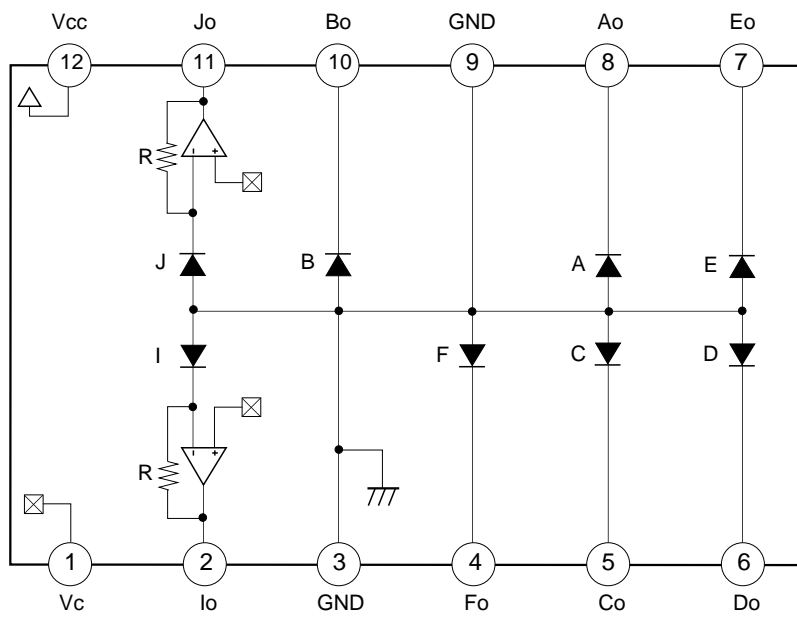

- Supply voltage           VCC       2.5 to 5.5   V

A, B, C, D, E, F, I, and J are photodiodes.

Electrical and Optical Characteristics

(VCC=3.0V, Vc=1.5V, Ta=25°C)

Item	Symbol	Conditions	Min.	Typ.	Max.	Unit
Current consumption	I <sub>CC</sub>	In the dark		2.2	3.2	mA
Dark current (A to F)	I <sub>D</sub>	In the dark			4.0	nA
Optical sensitivity (A to F)	S	P <sub>O</sub> =5μW, λ = 780nm	0.3	0.4		A/W
Output offset voltage (I, J)	V <sub>off</sub>	In the dark	-10	5.5	10	mV
Output offset voltage difference (I-J)	ΔV <sub>off</sub>	In the dark	-10	0	10	
Output voltage (I, J)	V <sub>O</sub>	P <sub>O</sub> =5μW, λ = 780nm	100	130	160	
Maximum output voltage (I, J)	V <sub>omax</sub>	P <sub>O</sub> =100μW, λ = 780nm	2.7	2.8		V
Frequency response (I, J)	f <sub>c</sub>	100kHz reference, -3 dB	1.8	2.3		MHz

Note)

1. V<sub>c</sub> is reference for output voltage and output offset voltage.
2. GND is reference for maximum output voltage.
3. Output voltage and frequency response are subject to conformation of design.

Pin Description

Pin No.	Symbol	I/O	Equivalent circuit	Description
1	Vc	I		<p>For a dual positive/negative power supply: GND</p> <p>For a single power supply: center voltage input</p>
2 11	Io Jo	O		<p>Output of electrical signals converted from optical signals</p>
3 9	GND	I		<p>For a dual positive/negative power supply: negative power supply</p> <p>For a single power supply: GND</p>
4 5 6 7 8 10	Fo Co Do Eo Ao Bo	O		<p>Output of electrical signals converted from optical signals (cathode pin of photodiode)</p>
12	Vcc	I		<p>Positive power supply</p>

## Notes on Operation

### 1. Connection to RF amplifiers

In the CXA1915AN, the RF signals (I, J) are of the voltage-output type. Therefore, the RF amplifier should have an I-V amplifier at the input block because the servo signals (A to F) are of current-output type.

### 2. Power supply

The CXA1915AN can be used either with a dual positive/negative power supply or with a single power supply. However, this IC is not provided with a center voltage generating circuit, and so when used with a single power supply the center voltage must be supplied by an RF amplifier or some other device.

Power supply connections for each case are as follows.

	(12) Vcc	(3) (9) GND	(1) Vc
Dual positive/ negative power supply	Positive power supply	Negative power supply	GND
Single power supply	Positive power supply	GND	Center voltage

Note) Pins 3 and 9 are shorted in the IC.

For both a dual positive/negative power supply and a single power supply, the voltage difference between the Vcc and GND pins should be within the range of 2.5 V and 5.5 V.
