*: The output LC filter must be changed to: $L = 30\mu H$; $C = 1\mu F$

** P_O = measured across the load using the following inductor:
COIL 58120 MPPA2 (magnetics) TURNS: 28 \varnothing 1mm

***: The zero-signal switching frequency can be obtained using the following expression: $F_{SW} = B_F/R_F$

****: The maximum value of R_F is related to the maximum possible value for the voltage drop on R_F itself

(1) for $V_{10} > 5.2V$, an input impedance of $10K\Omega$ is to be considered
