- **Drive Capability:**
  - **Segment . . . 30 mA × 16 Bits**
  - **Common . . . 640 mA**
- **Constant Current Output . . . 3 mA to 30 mA (Current Value Setting for All Channels Using External Resistor)**
- **Constant Current Accuracy ±6% (Maximum Error Between Bits)**
- **Data Input: Clock Synchronized Serial Input**
- **LED Type Applied Cathode Common**
- **Logic Power Supply Voltage 4.5 V to 5.5 V**
- **LED Power Supply Voltage 4.5 V to 5.5 V**
- **Operating Frequency . . . 10 MHz**
- **Operating Free-Air Temperature Range –20°C to 85°C**
- **48-Pin SSOL Package**

description

The TLC5920 is an LED driver incorporating a 16-channel shift register, data latch, and constant current circuitry with current value control and 8-channel common driver into a single chip. The constant output current is capable of 30 mA for 16 bits simultaneously, and the current value can be set by one external register. This device also includes a 16-bit segment driver and 8-bit common driver; therefore, the monocolor LED array with 16 × 8 dots can be driven by only one TLC5920, and a two-color LED array with 16 x 16 dots can be driven by two TLC5920s.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

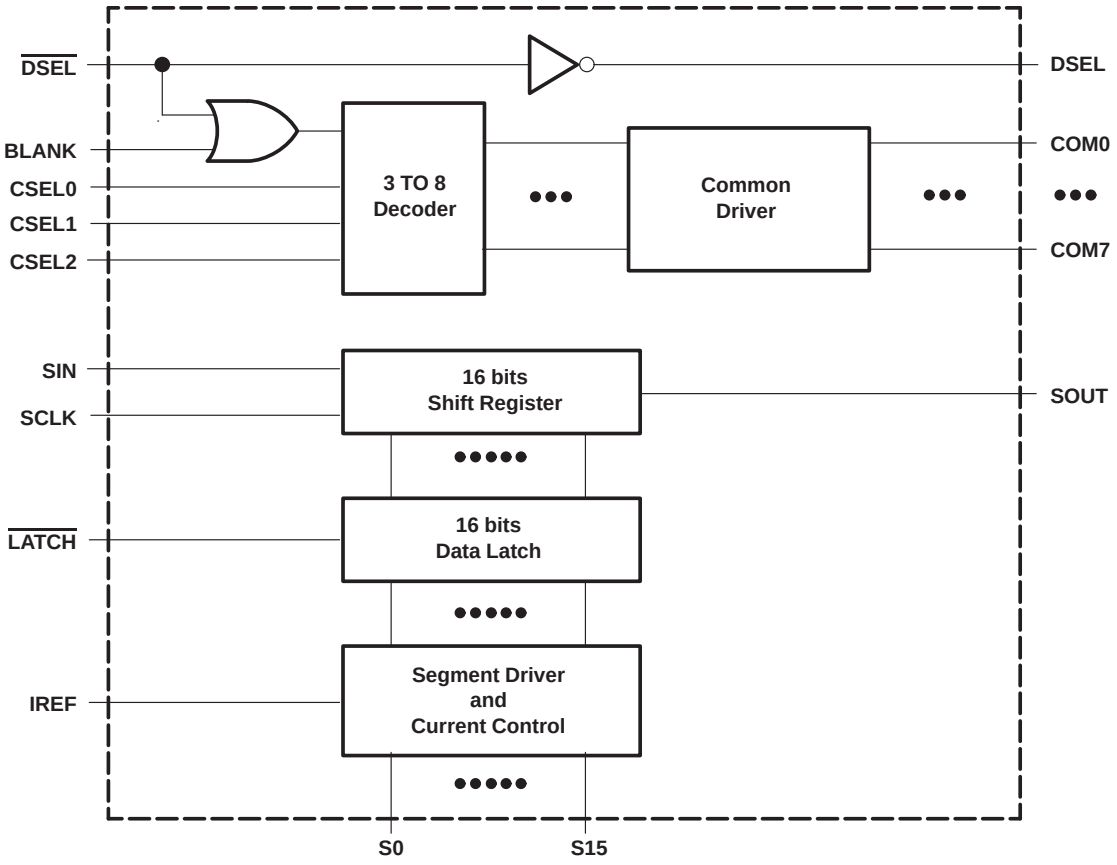
functional block diagram



Terminal Functions

TERMINAL NAME	TERMINAL NO.	I/O	DESCRIPTION
BLANK	39	I	Blank(light off). By turning all the output for the common driver off, the LED is turned off. When BLANK is high, the LED is turned off.
COM0 – COM7	4, 3, 2, 1, 47, 46, 45, 44	O	LED common driver output
CSEL0 – 2	38, 36, 35	I	Common driver select. One terminal out of COM0 through COM7 is selected. **2 1 0 Common Driver** L L L 0 L L H 1 L H L 2 L H H 3 H L L 4 H L H 5 H H L 6 H H H 7
$\overline{\text{DSEL}}$	33	I	Display select. When $\overline{\text{DSEL}}$ is high, the LED is turned off. Note that, when BLANK is high, the LED is turned off with no regard to the $\overline{\text{DSEL}}$ input.
DSEL	30	O	Display select output. The inverted data of $\overline{\text{DSEL}}$ is clocked out.
GNDANA	21		Analog ground
GNDLED	5, 43, 48		LED driver ground
GNDLOG	37		Logic ground
IREF	17	I	Constant current control setting. The LED current is set to the desired value by connecting an external resistor between IREF and GND.
$\overline{\text{LATCH}}$	41	I	Latch. When $\overline{\text{LATCH}}$ is high, data on the shift register goes through latch. When $\overline{\text{LATCH}}$ is low, data is latched.
SIN	42	I	Serial input for display
SOUT	32	O	Serial output for display
SCLK	40	I	Synchronous clock input for serial data transfer. The input data of SIN is synchronized to the rising edge of SCLK, and transferred to SOUT.
S0 – S15	9, 10, 11, 12, 13, 14, 15, 16, 22, 23, 24, 25, 26, 27, 28, 29	O	LED segment driver output
VANA	19		Analog power supply voltage
VLOG	34		Logic power supply voltage
VLED	8, 18, 31		LED driver power supply voltage

absolute maximum ratings† (see Note 1)

Logic supply voltage, $V_{(LOG)}$ . . . . . – 0.3 V to 7 V
LED supply voltage, $V_{(LED)}$ . . . . . – 0.3 V to 7 V
Analog supply voltage, $V_{(ANA)}$ . . . . . – 0.3 V to 7 V
Output current, $I_{OH(S)}$ . . . . . – 32 mA
Output current, $I_{OL(C)}$ . . . . . 650 mA
Input voltage range, V_I . . . . . – 0.3 V to $V_{(LOG)}$ + 0.3 V
Output voltage range, V_O . . . . . – 0.3 V to $V_{(LOG)}$ + 0.3 V
Continuous total power dissipation . . . . . 1500 mW
Thermal resistance . . . . . 83°C/W
Operating free-air temperature range (see Note 2), T_A . . . . . – 20 to 85°C
Storage temperature range, T_{stg} . . . . . –40°C to 125°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltage values are with respect to GND terminal.
2. $T_J \le 150°C$ (refer to appendix thermal condition).

recommended operating conditions

dc characteristics (see Note 3)

PARAMETER	TEST CONDITIONS	MIN	NOM	MAX	UNIT
Logic supply voltage, $V_{(LOG)}$		4.5	5	5.5	V
LED supply voltage, $V_{(LED)}$		4.5	5	5.5	V
Analog power supply, $V_{(ANA)}$		4.5	5	5.5	V

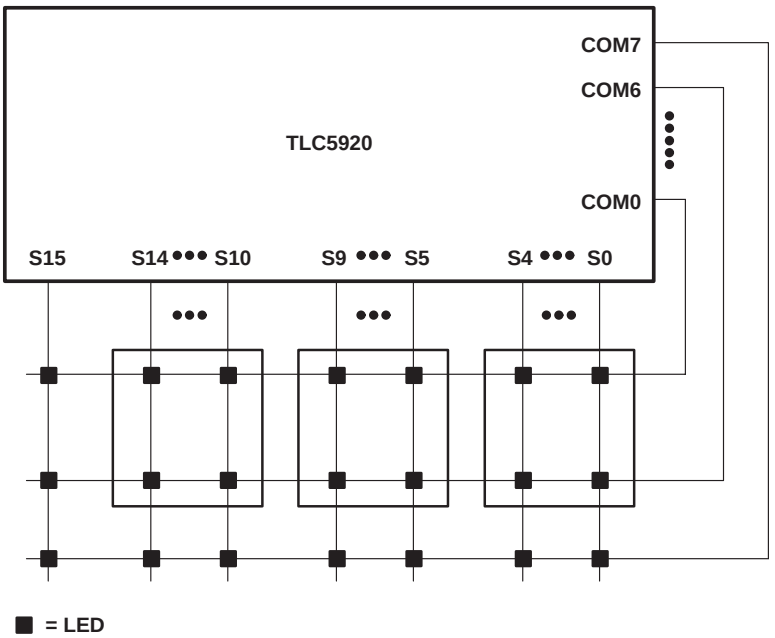
	Two	8	1	1/8	30
5 x 7	Mono	3	1	1/8	30
	Two	1	1	1/8	30
8 x 8	Mono	2	1	1/8	30
	Two	1	1	1/8	30
16 x 16	Mono	2	2	1/16	20
	Two	1	2	1/16	20
	Three	1	3	1/16	13
24 x 24	Mono	2	3	1/24	13
	Two	1	3	1/24	13



APPLICATION INFORMATION

example 2

Using two TLC5920s, an LED with two colors and 16 x 16 dots can be driven. The number of LED arrays can also be increased by making a cascade connection in the application circuit.

IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
