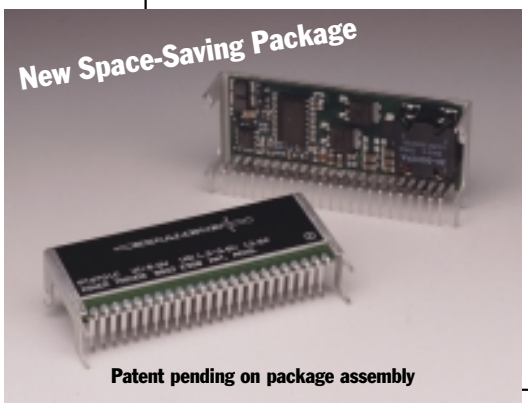
PT6700 Series

13 AMP PROGRAMMABLE INTEGRATED SWITCHING REGULATOR

Revised 9/13/99

EXCALIBUR

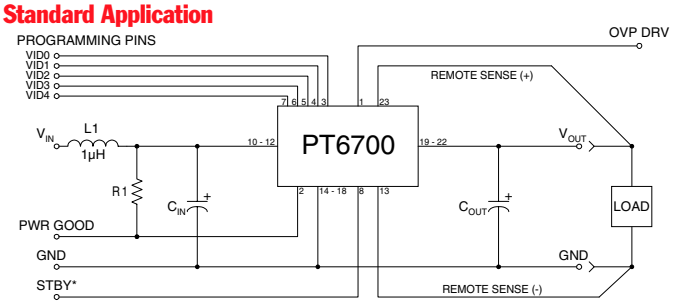


The PT6700 is a new series of high-performance, 13 Amp Integrated Switching Regulators (ISRs) housed in a unique, space-saving 23-pin SIP package. The 13A capability allows easy integration of the latest high-speed, low-voltage µPs and bus drivers into existing 5V systems.

The output voltage of the PT6700 can be programmed easily from 1.3V to 3.5V with a 5-bit input compatible with Intel's Pentium® II Processor.

The PT6700 includes a differential remote sense which automatically compensates for any voltage drop from the ISR to the load. Also provided are internal short circuit protection, OVP drive and a power good output signal. When over-voltage is detected, the PT6700 provides drive for an external crowbar or other protection circuitry.

Standard Application



C_{in} = Required 1000µF electrolytic
C_{out} = Required 330µF electrolytic
L1 = Optional 1µH input choke
R1 = Required 10kΩ pull-up when using Pwr Good signal. Pwr good output is high when the output voltage is within specification.

* ISR-will operate down to no load with reduced specifications.

Output Capacitors: *The PT6700 series requires a minimum ouput capacitance of 330µF. The maximum allowable output capacitance is 15,000µF.*

Input Filter: *An input filter is optional for most applications. The input inductor must be sized to handle 12.5ADC with a typical value of 1µH. The input capacitance must be rated for a minimum of 1.6Arms of ripple current. For transient or dynamic load applications, additional capacitance may be required.*
