description

These quadruple TTL J-$\overline{K}$ flip-flops incorporate a number of third-generation IC features that can simplify system design and reduce flip-flop package count by as much as 50%. They feature hysteresis at the clock input, fully buffered outputs, and direct clear capability. The positive-edge-triggered SN54376 and SN74376 are directly compatible with most Series 54/74 MSI registers.

The SN54376 is characterized for operation over the full military temperature range of −55°C to 125°C; the SN74376 is characterized for operation from 0°C to 70°C.
