SDAS083B - APRIL 1982 - REVISED DECEMBER 1994

- Eight Latches in a Single Package
- 3-State Bus-Driving True Outputs
- Full Parallel Access for Loading
- Buffered Control Inputs
- pnp Inputs Reduce dc Loading on Data Lines
- Package Options Include Plastic Small-Outline (DW) Packages, Ceramic Chip Carriers (FK), and Standard Plastic (N) and Ceramic (J) 300-mil DIPs

These octal transparent D-type latches feature 3-state outputs designed specifically for driving highly capacitive or relatively low-impedance loads. They are particularly suitable for implementing buffer registers, I/O ports, bidirectional bus drivers, and working registers.

While the latch-enable (LE) input is high, the Q outputs follow the data (D) inputs. When LE is taken low, the Q outputs are latched at the logic levels set up at the D inputs.

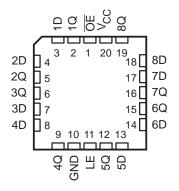

A buffered output-enable  $(\overline{OE})$  input can be used to place the eight outputs in either a normal logic state (high or low) or a high-impedance state. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance state and the increased drive provide the capability to drive bus lines without interface or pullup components.

SN54ALS373, SN54AS373 . . . J PACKAGE

SN74ALS373A, SN74AS373 ... DW OR N PACKAGE

SN54ALS373, SN54AS373 . . . FK PACKAGE (TOP VIEW)

OE does not affect internal operations of the latches. Old data can be retained or new data can be entered while the outputs are off.

The SN54ALS373 and SN54AS373 are characterized for operation over the full military temperature range of –55°C to 125°C. The SN74ALS373A and SN74AS373 are characterized for operation from 0°C to 70°C.

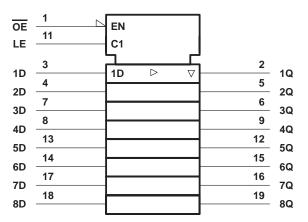

FUNCTION TABLE (each latch)									
	INPUTS		OUTPUT

#### logic diagram (positive logic)

To Seven Other Channels

<sup>†</sup> This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

#### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)<sup>‡</sup>

Supply voltage, V <sub>CC</sub>	
Input voltage, V <sub>1</sub>	
Voltage applied to any output in the high state or power-off state	
Operating free-air temperature range, T <sub>A</sub> : SN54ALS373	55°C to 125°C
SN74ALS373A	0°C to 70°C
Storage temperature range	65°C to 150°C

Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

#### recommended operating conditions

SDAS083B - APRIL 1982 - REVISED DECEMBER 1994

 B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
C. When measuring propagation delay items of 3-state outputs, switch S1 is open.

- D. All input pulses have the following characteristics: PRR  $\leq$  1 MHz, t<sub>f</sub> = t<sub>f</sub> = 2 ns, duty cycle = 50%.
- E. The outputs are measured one at a time with one transition per measurement.
- ... The outputs are measured one at a time with one transition per measurement.
