CMOS 4-Bit Magnitude Comparator

High Voltage Types (20-Volt Rating)

CD4585B is a 4-bit magnitude comparator designed for use in computer and logic applications that require the comparison of two 4-bit words. This logic circuit determines whether one 4-bit word (Binary or BCD) is "less than", "equal to", or "greater than" a second 4-bit word.

The CD4585B has eight comparing inputs (A_3, B_3 , through A_0, B_0), three outputs ($A < B, A = B, A > B$) and three cascading inputs ($A < B, A = B, A > B$) that permit systems designers to expand the comparator function to 8, 12, 16.....4N bits. When a single CD4585B is used, the cascading inputs are connected as follows: ($A < B$) = low, ($A = B$) = high, ($A > B$) = high.

Cascading these units for comparison of more than 4 bits is accomplished as shown in Fig. 13.

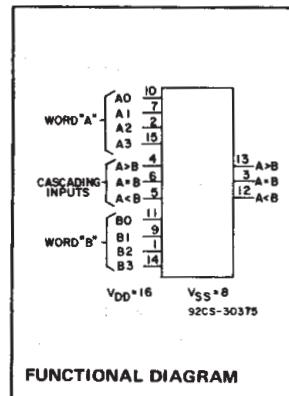

The CD4585B types are supplied in 16-lead hermetic dual-in-line ceramic packages (D and F suffixes), 16-lead dual-in-line plastic packages (E suffix), and in chip form (H suffix). This device is pin-compatible with low-power TTL type 7485 and the CMOS types MC14585 and 40085.
