SCBS258K - JUNE 1993 - REVISED APRIL 1999

- **Members of the Texas Instruments** Widebus™ Family
- State-of-the-Art Advanced BiCMOS Technology (ABT) Design for 3.3-V Operation and Low Static-Power Dissipation
- Output Ports Have Equivalent 22- Ω Series Resistors, So No External Resistors Are Required
- **Support Mixed-Mode Signal Operation** (5-V Input and Output Voltages With 3.3-V V_{CC})
- **Support Unregulated Battery Operation** Down to 2.7 V
- Typical V_{OLP} (Output Ground Bounce) $< 0.8 \text{ V at V}_{CC} = 3.3 \text{ V}, T_A = 25^{\circ}\text{C}$
- Ioff and Power-Up 3-State Support Hot Insertion
- Bus Hold on Data Inputs Eliminates the **Need for External Pullup/Pulldown** Resistors
- Distributed V_{CC} and GND Pin Configuration **Minimizes High-Speed Switching Noise**
- Flow-Through Architecture Optimizes PCB Layout
- Latch-Up Performance Exceeds 500 mA Per JESD 17
- **ESD Protection Exceeds 2000 V Per** MIL-STD-883. Method 3015: Exceeds 200 V Using Machine Model (C = 200 pF, R = 0)
- **Package Options Include Plastic Shrink** Small-Outline (DL) and Thin Shrink Small-Outline (DGG) Packages and 380-mil Fine-Pitch Ceramic Flat (WD) Package **Using 25-mil Center-to-Center Spacings**

SN54LVTH162244 . . . WD PACKAGE SN74LVTH162244 . . . DGG OR DL PACKAGE (TOP VIEW)

description

The 'LVTH162244 devices are 16-bit buffers and line drivers designed for low-voltage (3.3-V) V_{CC} operation, but with the capability to provide a TTL interface to a 5-V system environment. These devices can be used as four 4-bit buffers, two 8-bit buffers, or one 16-bit buffer. These devices provide true outputs and symmetrical active-low output-enable (\overline{OE}) inputs.

The outputs, which are designed to source or sink up to 12 mA, include equivalent 22- Ω series resistors to reduce overshoot and undershoot.

Active bus-hold circuitry is provided to hold unused or floating data inputs at a valid logic level.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Widebus is a trademark of Texas Instruments Incorporated

SN54LVTH162244, SN74LVTH162244 3.3-V ABT 16-BIT BUFFERS/DRIVERS WITH 3-STATE OUTPUTS

SCBS258K - JUNE 1993 - REVISED APRIL 1999

description (continued)

When V_{CC} is between 0 and 1.5 V, the devices are in the high-impedance state during power up or power down. However, to ensure the high-impedance state above 1.5 V, \overline{OE} should be tied to V_{CC} through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

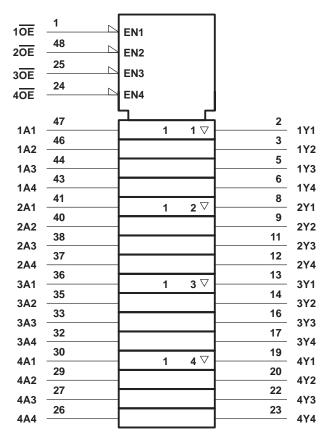

These devices are fully specified for hot-insertion applications using Ioff and power-up 3-state. The Ioff circuitry disables the outputs, preventing damaging current backflow through the devices when they are powered down. The power-up 3-state circuitry places the outputs in the high-impedance state during power up and power down, which prevents driver conflict.

The SN54LVTH162244 is characterized for operation over the full military temperature range of –55°C to 125°C. The SN74LVTH162244 is characterized for operation from -40°C to 85°C.

FUNCTION TABLE (each 4-bit buffer)

INP	JTS	ОИТРИТ
OE	Α	Υ
L	Н	Н
L	L	L
Н	X	Z

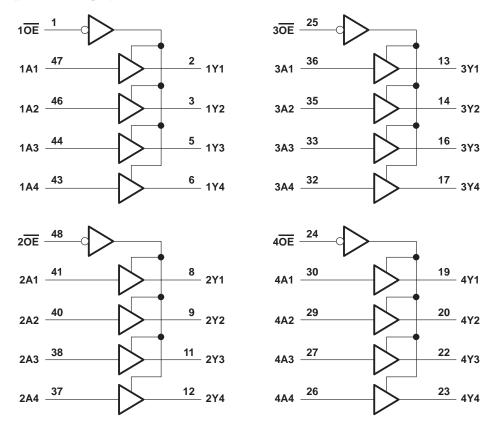

logic symbol†

[†] This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

logic diagram (positive logic)

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V _{CC}	
Input voltage range, V _I (see Note 1)	0.5 V to 7 V
Voltage range applied to any output in the high-impedance	
or power-off state, V _O (see Note 1)	0.5 V to 7 V
Voltage range applied to any output in the high state, V _O (see Note 1)	
Current into any output in the low state, I _O	30 mA
Current into any output in the high state, I _O (see Note 2)	30 mA
Input clamp current, I _{IK} (V _I < 0)	–50 mA
Output clamp current, I _{OK} (V _O < 0)	–50 mA
Package thermal impedance, θ _{JA} (see Note 3): DGG package	89°C/W
DL package	94°C/W
Storage temperature range, T _{stg}	–65°C to 150°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

- 2. This current flows only when the output is in the high state and $V_O > V_{CC}$.
- 3. The package thermal impedance is calculated in accordance with JESD 51.

SN54LVTH162244, SN74LVTH162244 3.3-V ABT 16-BIT BUFFERS/DRIVERS WITH 3-STATE OUTPUTS

SCBS258K - JUNE 1993 - REVISED APRIL 1999

recommended operating conditions (see Note 4)

		SN54LVTH	162244	SN74LVTH	UNIT		
					MIN	MAX	UNIT
Vcc	Supply voltage	2.7	3.6	2.7	3.6	V	
VIH	High-level input voltage	2		2		V	
V _{IL}	Low-level input voltage		0.8		0.8	V	
VI	Input voltage			5.5		5.5	V
loh	High-level output current			-12		-12	mA
loL	Low-level output current			12		12	mA
Δt/Δν	Input transition rise or fall rate	Outputs enabled		10		10	ns/V
Δt/ΔV _{CC}	Power-up ramp rate				200		μs/V
T _A	Operating free-air temperature			125	-40	85	°C

NOTE 4: All unused control inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report, Implications of Slow or Floating CMOS Inputs, literature number SCBA004.

SCBS258K - JUNE 1993 - REVISED APRIL 1999

PARAMETER MEASUREMENT INFORMATION

NOTES: A. C_L includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR \leq 10 MHz, $Z_O = 50 \Omega$, $t_f \leq$ 2.5 ns. $t_f \leq$ 2.5 ns.
- D. The outputs are measured one at a time with one transition per measurement.

IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
