23-MEMORY TONE/PULSE DIALER WITH AUTOREDIAL RTC AND LCD DISPLAY FUNCTIONS

GENERAL DESCRIPTION

The W91570DN series ICs are Si-gate CMOS ICs that provide the signals needed for either pulse or tone dialing. They feature 23 number memories and a 16-digit LCD driver for displaying telephone numbers and calling time. A real time clock is included to display the time of day. The W91570DN series is fabricated using CMOS technology providing good performance in low voltage, low power applications.

FEATURES

- Three by 32 digits for redial, save and mercury memory
- Twenty by 16 digits for one-touch direct or two-touch indirect repertory memory
- Uses 6×10 keyboard
- Pause, Pulse-to-tone (*/T) and flash can be stored as a digit in memory
- Minimum tone output duration: 87 mS
- Minimum intertone pause: 87 mS
- Tone/Pulse mode pin selectable
- Make/Break ratio pin selectable
- Dialing rate (10 or 20 ppS) pin selectable
- Pause time (2.0 or 3.6 Sec) selectable by keypad
- Flash break time (100, 300, or 600 mS) selectable by keypad
- Built-in 12 or 16-digit LCD driver (1/4 duty, 1/3 bias) selectable by mask option
- Built-in calling timer from [00:00] to [59:59]
- Uses 3.579545 MHz TV quartz crystal or ceramic resonator
- Uses 32768 Hz crystal as RTC frequency base
- Packaged in 80-pin plastic QFP with RTC
- Provides one-key-redial and auto-redial functions
- Switchable 24-hour clock or 12-hour clock with p.m. mode
- 0 or 9 dialing inhibition pin for PABX systems or long distance dialing lock out
- On-hook debounce: 150 msec in normal mode and 20 msec in lock mode
- Off-hook delay 300 mS in lock mode (i.e. $\overline{DP}$ will keep low for 300 mS while off hook)
- First key-in delay: 300 msec in lock mode
- MUTE key for speech mute
- Cascade and mixed dialing allowed
- The functions of the different dialers in the W91570DN series are shown in the following table:

PRODUCT NO.	LCD DIGITS	LOCK	RTC BATTERY
W91572DNF	16	√	1.5V
W91574DNF	16	√	3V
W91576DNF	12	√	1.5V
W91578DNF	12	√	3V

PIN DESCRIPTION

SYMBOL	PIN NO.	I/O	FUNCTION
Row, Column Inputs	29–33 and 20–28	I	The keyboard inputs may be used with either the standard 6×10 keyboard, an inexpensive single contact (form A) keyboard or electronic input. A valid key entry is defined by a single row being connected to a single column.
XT1, $\overline{XT}$	34, 35	I, O	A built-in inverter provides oscillation with an inexpensive 3.579545 MHz crystal or ceramic resonater. The oscillator ceases when a keypad input is not sensed after chip enable and dialing is finished. The crystal frequency deviation is ±0.02%.
T/P $\overline{MUTE}$	16	O	The T/P $\overline{MUTE}$ is a conventional CMOS N-channel open drain output. The output transistor is switched on low level during the dialing sequence (both pulse and tone mode), one-key redial break, auto redial break and flash break. Otherwise, it is switched off.
H/P MUTE	15	O	The H/P MUTE is a conventional CMOS inverter output. During pulse dialing, one-key redial break, auto redial break, flash break, hold, and mercury functions, this pin will output an active high. It remains in a low state at all other times.
$\overline{KMUTE}$	6	O	The $\overline{KMUTE}$ is a CMOS N-channel open drain output. The output transistor is switched on only during mute function. Otherwise, it is switched off.
$\overline{HKS}$	36	I	Hook switch input. $\overline{HKS}$ = V$_{DD}$ or floating: On-hook state. Chip in sleeping mode, no operation. $\overline{HKS}$ = V$_{SS}$: Off-hook state. Chip enable for normal operation. $\overline{HKS}$ pin is pulled to V$_{DD}$ by internal resistor.

Pin Description, continued

SYMBOL	PIN NO.	I/O	FUNCTION
$\overline{\text{HFI}}$, HFO	37, 17	I, O	Handfree control pins. A low pulse on the $\overline{\text{HFI}}$ input pin toggles the handfree control state. Status of the handfree control is listed in the following table:
$\overline{\text{DP}}/\overline{\text{C10}}$	18	O	This pin is a CMOS N-channel open drain output. The flash key will cause $\overline{\text{DP}}/\overline{\text{C10}}$ to go active in either pulse mode or tone mode. In lock mode, the $\overline{\text{DP}}/\overline{\text{C10}}$ keeps low for 300 mS during off-hook delay time (If first off-hook occured after power-on reset, the $\overline{\text{DP}}/\overline{\text{C10}}$ will keep high for 100ms then go low 200 mS. It will be recovered when first key-in was accepted). The timing diagram is shown as Figure 1(a), 1(b), 1(c), 1(d).
DTMF	12	O	In pulse mode, this pin remains in low state at all times. In tone mode, it will output a dual or single tone. Detailed timing diagram for tone mode is shown in Figure 2(a), 2(b), 2(c), 2(d).
MODE	19	I	Pulling the mode pin to VSS places the dialer in tone mode. Pulling the mode pin to VDD places the dialer in pulse mode and the dialing rate is 10 ppS. Floating the mode pin places the dialer in pulse mode and the dialing rate is 20 ppS.

Table within HFI, HFO row:

CURRENT STATE		NEXT STATE		
Hook SW.	HFO	Input	HFO	Dialing
−	Low	$\overline{\text{HFI}}$ ⌐	High	Yes
On Hook	High	$\overline{\text{HFI}}$ ⌐	Low	No
Off Hook	High	$\overline{\text{HFI}}$ ⌐	Low	Yes
On Hook	−	Off Hook	Low	Yes
Off Hook	Low	On Hook	Low	No
Off Hook	High	On Hook	High	Yes

The $\overline{\text{HFI}}$ pin is pulled to VDD by internal resistor.

Detailed timing diagrams are shown in Figure 4(a), 4(b).

Table within DTMF row:

OUTPUT FREQUENCY			
	Specified	Actual	Error %
R1	697	699	+0.28
R2	770	766	-0.52
R3	852	848	-0.47
R4	941	948	+0.74
C1	1209	1216	+0.57
C2	1336	1332	-0.30
C3	1477	1472	-0.34

Winbond
Electronics Corp.

Pin Description, continued

| SYMBOL	PIN NO.	I/O	FUNCTION
B/M	11	I	Make:Break ratio select pin. If B/M = V_{DD}, the M/B ratio is 40:60. If B/M = V_{SS}, the M/B ratio is 33.3:66.7. The B/M pin is pulled to V_{DD} by internal resistor.
$\overline{LOCK}$	10 (for all lock version)	I	The $\overline{LOCK}$ pin is used to prevent "0" or "9" dialing under PABX system long distance call control. When the first key input after reset is "0" or "9", all the key inputs, including "0" or "9" key, become invalid, and the chip generates no output. The telephone is reinitialized by a reset. The following table describes the functions of the $\overline{LOCK}$ pin: table: LOCK PIN / FUNCTION — Floating: Normal dialing; V_{DD}: "0", "9" dialing inhibited; V_{SS}: "0" dialing inhibited
COM1 to COM4	49 to 52	O	COM1 to COM4 are the common signal output terminal for the 1/4 duty LCD.
SEG1 to SEG32	53 to 80, 1 to 4	O	SEG1 to SEG32 are the 16-digit segment signal outputs.
V_{LCD}	45	O	Power supply pin for LCD driver. A 0.1 μF capacitor is connected between V_{LCD} and V_{SS}.
CP, CN	48, 47	I	CP is the voltage control capacitor positive pin. CN is the voltage control capacitor negative pin. A 0.1μF capacitor is connected between these two pins.
V_{DD}, V_{SS}	9, 14	I	Power input pins.
XT2, $\overline{XT2}$	43, 44	I, O	A quartz crystal oscillator provides an RTC frequency time base of 32.768 KHz.
V_{RTC1}, V_{RTC2}	38, 46	I	Either V_{RTC1} should be connected to a 1.5V battery (W91572DN/576DN) or V_{RTC2} should be connected to a 3.0V battery(W91574DN/578DN), which supplies the power source for the RTC.
$\overline{SET}_{RTC}$	13	I	In the chip enable state, pulling $\overline{SET}_{RTC}$ to V_{SS} toggles the RTC set function on/off, when the set function is toggled on, the RTC can be set using the "HOUR" and "MIN" keypads.

The table inside the LOCK cell:

$\overline{LOCK}$ PIN	FUNCTION
Floating	Normal dialing
V_{DD}	"0", "9" dialing inhibited
V_{SS}	"0" dialing inhibited

Winbond
Electronics Corp.

Pin Description, continued

SYMBOL	PIN NO.	I/O	FUNCTION
AP$_{SET}$	42	I	If AP$_{SET}$ = V$_{DD}$ or floating, 24-hour clock mode. If AP$_{SET}$ = V$_{SS}$, 12-hour clock with p.m. mode.
ARD	40	I	Auto redial function selection. When ARD is left floating, the one-key redial function is enabled.
KT	7	O	The key tone output is a conventional CMOS inverter. The key tone is generated as any valid key pressed, as the KT pin generates a 1.2 KHz square wave which keeps on 35 mS; otherwise, it remain in low state.
TEST, $\overline{TEST1}$, $\overline{TEST2}$, $\overline{TESTL}$	5, 8, 39, 41	I	For testing only.
NC	10 (for W91572/574/ W91576/578)	-	No connection.

Table within ARD row:

ARD	BREAK	PAUSE	WAIT INTERVAL	REPEAT TIMES
V$_{DD}$	4 secs	1 sec	25 secs	10
V$_{SS}$	30 secs	1 sec	30 secs	10
Floating	4 secs	1 sec	-	1

BLOCK DIAGRAM

FUNCTIONAL DESCRIPTION

Keyboard Operation

C1	C2	C3	C4	C5	C6	C7	C8	C9	$\overline{DP}/\overline{C10}$	
1	2	3	E	HOUR	M0	M5	M10	M15	HOLD1	R1

F1	F2	F3	CHK	TIM	M4	M9	M14	M19	RTC	R5
R/P2	-	ICON12	ICON13	ICON14	ICON15	ICON16				VDD/Vx/R6

- E: Store digit
- MUTE: Mute key
- F1, F2, F3: Flash keys
- SAVE: Save memory key
- MER: Mercury memory key
- OKR: One-key redial function
- RTC: Real time clock toggle key
- HOLD1, HOLD2: Hold function keys
- R/P1, R/P2: Redial and pause function keys, P1 is 3.6 sec. and P2 is 2.0 sec.
- TIM: a. Display last calling time
     b. Start and/or stop counting up calling time
- HOUR and MIN: Active when setting mode is operated after off-hook
- A1, A2: Indirect repertory memory dialing function keys, A1 for page 1 and A2 for page 2

  If Lp = 0 to 9, Mp = M0 to M9, and Mq = M10 to M19, then

  a. A1 + Lp (or Mp) the memory location M0 to M9 will be selected

  b. A2 + Lp (or Mp) the memory location M10 to M19 will be selected

  c. A1 (or A2) + Mq the memory location M10 to M19 will be selected

- */T: * in tone mode and P→T in pulse mode
- CHK: a. Check dialing number

  b. Check last dialing time

  c. Memory check (except mercury)
- ICON12, ..., ICON16: Keys reserved for user, can be toggled on any time when the chip is enabled

Notes: D1, ..., Dn, D1', ..., Dn': 0, ..., 9, ∗/T, #

    R/P: R/P1 or R/P2

     An: A1, A2

     Ln: 0, ..., 9, map to indirect memory location 0, ..., 9

     Mn: Direct memory location M0, ..., M19

Normal Dialing

| OFF HOOK | (or | ON HOOK | & | HFI iŏ |), | D1 | , | D2 | , ..., | Dn |

1. D1, D2, ..., Dn will be dialed out.

2. Dialing length is unlimited, but redial is inhibited if the length oversteps 32 digits in normal dialing.

Redialing

If ARD pin = floating, the one-key redial function is selected:

1. | OFF HOOK | (or | ON HOOK | & | HFI iŏ |), | D1 | , | D2 | , | Check Memory | (or

   | Number Store |), | D3 | , ..., | Dn | , Busy, | ON HOOK | , | OFF | (or

| | | | Come | | HOOK |

| ON HOOK | & | $\overline{HFI}$ ı̃ǒ |), | R/P |

a. The | R/P | key can execute the redial function only as the first dialing after off-hook; otherwise, it

will invoke the pause function.

b. The redial memory contents will be D3, ..., Dn.

c. Redial memory can be checked in memory check mode.

d. If redialing length oversteps 32 digits, the redialing function will be inhibited.

2. | OFF HOOK | (or | ON HOOK | & | $\overline{HFI}$ ı̃ǒ |), | D1 | , | D2 | , ..., | Dn | , Busy, | OKR |

a. If the dialing | D1 | to | Dn | is finished, pressing the | OKR | key will cause the pulse output of

pin $\overline{DP}$ / $\overline{C10}$ to go low for 2.2 seconds break time and 0.6 seconds pause time will be added automatically.

b. If the pulses of the dialed digits | D1 | to | Dn | have not finished, | OKR | will be ignored.

c. The one-key redialing function timing diagram is shown in Figure 3.

Number Entry

1. | OFF HOOK | (or | ON HOOK | & | $\overline{HFI}$ ı̃ǒ |), | D1 | , | D2 | , ..., | Dn | , | E | (many times

same as one time), | Mn | (or | An | , | Ln |), | ON HOOK |

D1, D2, ..., Dn will be stored in memory location Mn (or Ln) and will be dialed out.

2. | OFF HOOK | (or | ON HOOK | & | $\overline{HFI}$ ı̃ǒ |), | E | , | D1 | , | D2 | , ..., | Dn | , | E |

(could be skipped), | Mn | (or | An | , | Ln |), | ON HOOK |

3. | OFF HOOK | (or | ON HOOK | & | $\overline{HFI}$ ı̃ǒ |), | E | , | D1 | , | D2 | , ..., | Dn | , | Mn |

(or | An | , | Ln |), | ON HOOK |

a. D1, D2, ..., Dn will be stored in memory location Mn (or Ln) but will not be dialed out.

b. | R/P | and | */T | keys can be stored as a digit in memory, in store mode, | R/P | is the pause function key.

c. The store mode is released after the store function is executed or when the state of the hook

switch changes is executed.

4. | OFF HOOK | , | E | , | Mn | (or | An | , | Ln |)

The redial content excluding memory dialing will be copied to memory location Mn (or Ln).

5. The first 16 digits will be stored into memory, if the key-in number over 16 digits.

Save

1. | OFF HOOK | (or | ON HOOK | & | HFI ǐǒ |), | D1 | , | D2 | , ..., | Dn | , CONVERSATION,

| E | , | D1' | , | D2' | , ..., | Dn' | , | SAVE |

D1', D2', ..., Dn' will be stored in save memory but will not be dialed out.

2. | OFF HOOK | (or | ON HOOK | & | HFI ǐǒ |), | D1 | , | D2 | , ..., | Dn | , | SAVE |

a. If the dialing sequence D1, D2, ..., Dn has not finished, SAVE will be ignored.

b. If the sequence off hook, D1, D2, ..., Dn (dialing finish), SAVE, SAVE is keyed in, D1, D2, ..., Dn

will be copied to save memory and D1, D2, ..., Dn will be dialed out again.

c. If the sequence off hook, D1, D2 (dialing finish), SAVE, D3, D4 (dialing finish), SAVE is keyed in,

D1, D2 will be copied to save memory and D3, D4 will not be copied to save memory.

d. All above sequences will be displayed on LCD.

Mercury

1. | OFF HOOK | (or | ON HOOK | & | HFI ǐǒ |), | D1 | , | D2 | , ..., | Dn | , CONVERSATION,

| E | , | D1' | , | D2' | , ..., | Dn' | , | MER |

D1', D2', ..., Dn' will be stored in mercury memory and display on the LCD, but will not be dialed out.

2. MERCURY memory content = D1', D2', ..., Dn'

| OFF HOOK | (or | ON HOOK | & | HFI ǐǒ |), | D1 | , | D2 | , ..., | Dn | , | MER | ,

| ON HOOK | , Come, | OFF HOOK | (or | ON HOOK | & | HFI ǐǒ |), | MER |

a. The dialing sequence will be D1, D2, ... Dn, on hook, off hook, D1', D2', ..., Dn'.

b. The MER key can be used to execute the mercury function only when it is the first key-in in dialing

  mode after off-hook or first priority flash operation.

c. The contents of mercury memory will not be displayed on the LCD except for mercury mark.

d. If the sequence D1, D2, ..., Dn, MER, on-hook, off-hook, MER is keyed in, D1, D2, ..., Dn will not

  be copied to mercury memory, D1', D2', ..., Dn' will be dialed out, and the mercury mark (icon 10)

  will be blinking after off-hook. Detailed timing diagram is shown in Figure 5.

e. Mercury memory cannot be checked in memory check mode.

Winbond
Electronics Corp.

Repertory Dialing

1. One-touch direct repertory dialing.

   a. | OFF HOOK | (or | ON HOOK | & | HFI íǒ |), | Mn | (or | R/P |)

   b. | OFF HOOK | (or | ON HOOK | & | HFI íǒ |), | SAVE | (or | MER |)

   c. | OFF HOOK | (or | ON HOOK | & | HFI íǒ |), | Mn | (or | R/P |), | SAVE |

2. Two-touch indirect repertory dialing.

  | OFF HOOK | (or | ON HOOK | & | HFI íǒ |), | An | , | Ln | (or | Mn |)

Access Pause

| OFF HOOK | (or | ON HOOK | & | HFI íǒ |), | D1 | , | D2 | , | R/P | , | D3 | , ..., | Dn |

, Busy, Come, | ON HOOK | , | OFF HOOK | (or | ON HOOK | & | HFI íǒ |), | R/P |

1. The first R/P functions as a pause key and the second as a first key-in redial key.

2. The pause function can be stored in memory, and only one R/P key can be released to the user.

3. The pause function is executed in normal dialing, redialing, or memory dialing.

4. The pause duration of 2.0 or 3.6 seconds per pause is selected through the keypad.

5. The default pause duration is 3.6 seconds after power on.

6. The pause function timing diagram is shown in Figure 6.

Pulse- to-tone (*/T)

| OFF HOOK | (or | ON HOOK | & | HFI íǒ |), | D1 | , | D2 | , ..., | Dn | , | */T | , | D1' | ,

| D2' | , ..., | Dn' |

1. If the mode switch is set to pulse mode, then the output signal will be:

       D1, D2, ... Dn, Pause (2.0 sec/3.6 sec), D1', D2', ..., Dn'
       (Pulse)   (Tone)

2. If the mode switch is set to tone mode, then the output signal will be:

       D1, D2, ... Dn, *, D1', D2', ..., Dn'
       (Tone)   (Tone)

3. The dialer remains in tone mode after the digits have been dialed out and can be reset to pulse mode only by going on-hook.

4. The pause time of pulse-to-tone is default to 3.6 seconds.

5. The pulse-to-tone function timing diagram is shown in Figure 7.

Flash (F = F1, F2, F3)

OFF HOOK (or ON HOOK & HFI ĭǒ), F

1. The dialer will execute a flash break time of 600 mS (F1), 300 mS (F2), or 100 mS (F3) and pause time of 1S before the next digit (except flash key) is dialed out.

2. Flash keeps first priority in normal dialing but insert flash can be stored into memory when flash is the first digit in memory. In this condition, only one flash key can be released to the user.

    a. E, F1, D1, D2, D3, E, Mn then the digit stored in Mn will be F1, D1, D2, D3.
    b. E, D1, F1, D2, D3, E, Mn then the digit stored in Mn will be D1, D2, D3.
    c. F1, D1, D2, D3, E, Mn then the digit stored in Mn will be D1, D2, D3.

3. The system will return to the initial state after the flash pause time is finished.

4. Keyboard functions are inhibited when flash break is being executed.

5. The flash timing diagram is shown in Figure 8.

Mute

OFF HOOK (or ON HOOK & HFI ĭǒ), MUTE

1. The MUTE is switched on and off by a toggle switch.

2. The function timing diagram is shown in Figure 9.

Hold Key

OFF HOOK (or ON HOOK & HFI ĭǒ), HOLD1 (or HOLD2)

1. The hold function is toggled on and off by Hold1 or Hold2 key. When the hold function is toggled on, the hold mark (icon 4) will be lit and all key-ins (except hold keys and icon keys) will be ignored.

2. The following are examples of hold function toggled on and off:

    a. OFF HOOK , HOLD1 (or HOLD2), HOLD1 (or HOLD2)

    b. OFF HOOK , HOLD1 (or HOLD2), HFI ĭǒ

    c. OFF HOOK , HOLD1 (or HOLD2), ON HOOK , HFI ĭǒ

    d. ON HOOK & HFI ĭǒ , HOLD1 (or HOLD2), HFI ĭǒ

3. Hold1 and Hold2 have the same function in off-hook state. The difference between Hold1 and Hold2 are shown as follows:

    a. If OFF HOOK , HOLD1 (or HOLD2), ON HOOK , HOLD1 is entered, then the

      dialer will be off-line.

If | OFF HOOK | , | HOLD1 | (or | HOLD2 |), | ON HOOK | , | HOLD2 | is entered, then

the dialer stay at hold function.

b. If | ON HOOK | & | $\overline{HFI}$ ī$\underline{\delta}$ | , | HOLD1 | (or | HOLD2 |), | HOLD1 | is entered, then

the dialer will be off-line.

If | ON HOOK | & | $\overline{HFI}$ ī$\underline{\delta}$ | , | HOLD1 | , (or | HOLD2 |), | HOLD2 | is entered, then

the dialer stay at hold function.

4. The function timing diagram is shown in Figure 10(a), 10(b), 10(c).

Adjusting Time Setting

| OFF HOOK | (or | ON HOOK | & | $\overline{HFI}$ ī$\underline{\delta}$ |), | $\overline{SET}$ RTC ī$\underline{\delta}$ | , | HOUR | , | MIN | ,

| $\overline{SET}$ RTC ī$\underline{\delta}$ | (or | ON HOOK |)

1. Only HOUR and MIN keys are valid in set RTC mode.

2. Hours and minutes count forward as long as the HOUR or MIN key is pressed.

3. The on/off function of $\overline{SET}$RTC is toggled, and the dialer will go back to a previous state after the toggle off $\overline{SET}$RTC function.

4. If the dialing sequence D1, D2, ..., Dn (including flash and pause) has not finished, $\overline{SET}$RTC (or 'RTC' key pressed) will be ignored.

RTC Display Mode

| OFF HOOK | (or | ON HOOK | & | $\overline{HFI}$ ī$\underline{\delta}$ |), | RTC |

1.The real time clock display mode can be toggled on and off by RTC key.

2. The icon display will not be changed when enter RTC display mode and set RTC mode.

Check Key

| OFF HOOK | (or | ON HOOK | & | $\overline{HFI}$ ī$\underline{\delta}$ |), | CHK | , | R/P | (or | OKR | , | SAVE | , | Mn |

, ..., etc.)

The redial (or memory) content will be displayed on the LCD when either | R/P | or | OKR | is keyed in.

Auto Redial

If ARD pin = V_{DD} or V_{SS}, the auto redial function is selected:

| OFF HOOK | (or | ON HOOK | & | $\overline{HFI}$ $\overline{i\tilde{o}}$ |), | OKR |
1. During time zone (B) the keypads are inhibited, and in time zone (A), (C) the auto redial can be interrupted by pressing any keypad or by going off-hook.
2. The visible dialing number will be blinking during the waiting time interval.
3. If OKR is the first key-in after off-hook or handfree then the first break and pause time will be ignored.
4. The following show examples to interrupt auto redial function:

OFF HOOK (or ON HOOK & $\overline{HFI}$ $\overline{i\tilde{o}}$), OKR , Any Keypad (at break time and waiting interval)

5. If ON HOOK & $\overline{HFI}$ $\overline{i\tilde{o}}$, OKR , OFF HOOK

   a. When in time zome (A) or (C), the auto-redial function will be interrupted and changed to hook mode after OFF HOOK

   b. When in time zome (B), the auto-redial functiion will continue and changed to hook mode after OFF HOOK

6. If ON HOOK & $\overline{HFI}$ $\overline{i\tilde{o}}$, OKR , $\overline{HFI}$ $\overline{i\tilde{o}}$ (any time) is entered, the dialer will be off-line.

7. The auto redial function timing diagram is shown in Figure 11(a), 11(b).
8. The calling time will auto-count when the auto-redial function is interrupted in break time zone (A) and (C).

TIM

OFF HOOK (or ON HOOK & $\overline{HFI}$ $\overline{i\tilde{o}}$), D1 , D2 , ..., Dn (or Redialing or Repertory dialing 1), CONVERSATION

1. If no key is pressed after dialing is finished, the LCD will display counting time after 6 seconds.
2. If the dialing sequence D1, D2, ..., Dn has not finished, TIM will be ignored.
3. The timer will be initialized by flash and auto redial.

Cascaded and Mixed Dialing

Cascaded Dialing

1. Definition of cascaded dialing:

   In cascaded dialing, a new sequence may be pressed before the previous sequence has been sent out completely. The following are examples of cascaded dialing:

   Example 1: | Normal dialing | + | Repertory dialing 1 | + | Repertory dialing 2 | +...

   Example 2: | Repertory dialing 1 | + | Normal dialing | + | Repertory dialing 2 | +...

   Example 3: | Redialing | + | Normal dialing | + | Repertory dialing 1 | +...

2. Normal dialing, redialing, or repertory dialing as represented by each rectangle above is treated as one sequence.

3. At most 64 digits are allowed in cascaded dialing, but there is no limitation on the number of sequences.

4. The content of cascaded dialing may a combination of normal dialing, redialing, and repertory dialing. Redialing is vaild only as the first key-in, however.

5. If | ON HOOK | , | OFF HOOK | , | OKR | is entered, then the cascaded dialing sequence

   described in the above examples will be dialed out only if there are not more than 32 digits. If the sequence exceeds 32 digits then the redialing is inhibited.

Mixed Dialing

1. Definition of mixed dialing:

   The examples of cascaded dialing given above are also examples of mixed dialing except that in mixed dialing a new sequence may be accepted only when the previous sequence has been dialed out completely.

2. There is no limitation on the number of digits and sequences in the mixed dialing.

3. The content of mixed dialing may be a combination of normal dialing, memory dialing, or one-key redialing.

4. If | ON HOOK | , | OFF HOOK | , | OKR | is entered, then the mixed dialing sequence

   described in the above examples will be dialed out only if the total number of digits does not exceed 32. If the total exceeds 32 digits, then redialing is inhibited.

Combining of Cascaded and Mixed Dialing

1. Cascaded dialing and mixed dialing may be combined, and each follows the rules described above.

2. To apply redialing to combinations of cascaded and mixed dialing:

   | ON HOOK | , | OFF HOOK | , | OKR | then redialing will be executed only if the total number of digits does not exceed 32. Otherwise, the redialing is inhibited.

3. If there had been n cascaded sequences with a total of 60 digits dialed, then for the (n+1)th cascaded sequence, one 4-digit normal dialing sequence or one complete repertory dialing sequence (length up to 32 digits) can be dialed. The (n+2)th sequence will not be accepted for cascaded dialing.

4. After a total of 64 digits of cascaded dialing have been completed, mixed dialing can be added.

ABSOLUTION MAXIMUM RATINGS

PARAMETER	SYMBOL	RATING	UNIT
DC Supply Voltage	$V_{DD}-V_{SS}$	-0.3 to +7.0	V
Input/Output Voltage	V_{IL}	$V_{SS}-0.3$	V
	V_{IH}	$V_{DD}+0.3$	
	V_{OL}	$V_{SS}-0.3$	
	V_{OH}	$V_{DD}+0.3$

LCD DISPLAY FORMAT

A. Normal Dialing
Off hook or press the "HFI" switch
(Here tone mode was selected).

Blinking

Dial" 0123456789123456"

and "78"

B. Redialing, Save Dialing, One Touch Dialing
Off hook or press the "HFI" switch
(Here tone mode was selected).

Blinking

Press the "R/P", "OKR", "SAVE" or "Mn" key
(Redial or SAVE or Mn = "8123456789")

C. Abbreviated Auto Dialing

Off hook or press the "HFI" switch
(Here tone mode was selected).

Blinking
Press the "A1" key in chip enable condition
(L5 = "9375607", here L5 is the fifth memory)

9375607
Press the "5" key

D. Memory Check

a.
Off-hook or press the "HFI" switch
(L6 = "314P4430256", and here handfree and tone mode were selected)

Blinking

Press the "CHK" key

C
Press the "A1" key
(The auto(A) is shown on check and store mode)

CA

314P4430256

Press the "6" key

b.

Blinking
Off-hook or press the "HFI" switch
(M1= "886P35P770066PP7126", and here pulse mode was selected)

Press the "CHK"

Blinking
Press the "M1" key
(Display 1 to 16 digits)
Press "any key"
(Display 17 to 19 digits)

E. Timer Function

a.

Blinking
Off-hook or press the "HFI" switch
(here pulse mode was selected)
Press the "TIM" key
(Display last calling time)

9375607

Dial "9375607"

.00-01
If "9375607" is dialed completed, the system will start timer after 6 seconds
(Timer will start counting up)

20-28
Press the "TIM"
(Timer will stop)

b.

Blinking

Off-hook or press the "HFI" switch
(here pulse mode was selected)

9375607

Dial "9375607"

.00-01

If "9375607" is dialed completed
press the "TIM" key
(Timer will start counting up)

C
Press the "CHK" key
(L6 = "314P4430256")

CA

Press the "A1" key

314P4430256

Press the "6" key

.00-36
The system will go back to timer mode after 6 seconds

(Timer count up continuously)

F
Press the "F1", "F2" or "F3" key

(The timer will stop and LCD will display a flash mark and flash pattern)

Ξ

*Blinking*
After flash break is executed

Ξ

Blinking

After flash pause is

F. RTC Setting Function

P 08-30-15
On-hook
(Display real time)

Off-hook, before $\overline{SET}$ RTC pin was switched ON
(Here tone mode was selected)

Blinking

P 08-30-00

Entering "Setting Mode"

P 08-38-00

Adjusting "Hour"
(Hour counts forward as long as pressing)

Blinking

P 10-38-00
Adjusting "Minute"
(Minute counts forward as long as pressing)
P 10-39-08

On-hook or switching $\overline{SET}_{RTC}$ pin OFF
(Here on-hook was selected)

## G. RTC Display Function

P 08-30-15

On-hook
(Display real time)

Blinking

Off-hook or press the "HFI" switch
(Here off-hook and tone mode was selected)
Blinking

Press the "MER" key
(MER = "035PP770066")

P 08-38-20

Press the "RTC" key when "MER" dialing
is completed within 6 seconds.

Press the "RTC" key again

00-01

If the "MER" is dialed completed for 6 seconds
H. Mute Function

Off-hook or press the "HFI" switch
Blinking

Dial "9375607"

If "9375607" is dialed completed
Press the "TIM" key
(Timer will start counting up)

Press the "MUTE"

Blinking

Press the "MUTE" key again
