The EDI88257C is a 2 Megabit 256Kx8 bit Monolithic CMOS Static RAM.

The 32 pin DIP pinout adheres to the JEDEC standard for the two megabit device, and is a pin replacement for the 256Kx8 module, EDI88257C. The device is upgradeable to the 512Kx8 SRAM, the EDI88512C. Pin 1 becomes the higher order address.

A Low Power version, EDI88257LP, offers a data retention function for battery back-up operation. Military product is available compliant to Appendix A of MIL-PRF-38535.

### NOTE:

Stress greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions greater than those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
