

QPP-020
60W, 869-894MHz
Class AB Power Stage

QuikPAC Module Data

General description:

The **QPP-020 QuikPAC™** RF power module is a Class AB amplifier stage designed for use in the driver or output stage of linear RF power amplifiers for cellular base stations. The power transistors are fabricated using Xemod's advanced design LDMOS process. This unit has a factory set, regulated and temperature compensated gate bias, eliminating the need for the user to provide adjustable gate bias voltage circuits and make individual bias adjustments during stage alignment.

Features:

- Single Polarity Operation
- Matched for 50 Ω RF interfaces
- XeMOS FET Technology
- Stable Performance
- QuikPAC System Compatible
- QuikClip or Flange Mounting

Notes:

This GR-version QuikPAC module has an internally regulated gate voltage that is preset at the factory. A voltage of +12VDC ($\pm 1V$) should be applied to each gate lead (pins 1 and 5). No further adjustment is required. The gate voltage is thermally compensated for operation over the temperature range listed in the data sheet. Although the module will operate with lower voltages applied, the internal regulator is not functioning and the specified performance may not be achieved.

Gate voltage must be applied coincident with or after application of the drain voltage to prevent potentially destructive oscillations. Bias voltages should never be applied to a module unless it is terminated on both input and output.

The quiescent current set during manufacture will be within the range specified in the Performance section (nominal $\pm 10\%$) and is selected to balance IMD, input return loss, and efficiency. This setting is suitable for most applications. Modules with different optimization profiles are available by special order.

Internal RF decoupling is included on all bias leads. No additional bypass elements are required, however some applications may require energy storage on the drain leads to accommodate time-varying waveforms.

The RF leads are internally protected against DC voltages up to 100V. Care should be taken to avoid video transients that may damage the active devices.

Package Styles
